RE: **REPORT OF PHASE I ENVIRONMENTAL SITE ASSESSMENT**
 WATER LINE REPLACEMENT IN DODSON AREA-AREA 1 ADDITION
 HOUSTON, TEXAS
 WBS No. S-000035-0205-3

ATL REPORT No.: E14-118

GENTLEMEN:

Associated Testing Laboratories (ATL) is pleased to submit the following Phase I ESA report for the above-mentioned project.

We appreciate the opportunity in working with you on this project and look forward to serving you in the future for environmental consulting needs. Please do not hesitate to contact us if you need more information or have any questions. Thank you for considering ATL for this project.

Respectfully submitted,
Associated Testing Laboratories (TBPE Firm # 4560)

Tom Murphy
Project Manager

1.0 EXECUTIVE SUMMARY

Associated Testing Laboratories, Inc. (ATL) has performed a Phase I Environmental Site Assessment (ESA) in accordance with the scope of work as described in the proposal E14-601, October 6, 2014 and limitations of ASTM E1527-05 standards as modified by the City of Houston Department of Public Works & Engineering, Infrastructure Design Manual Chapter 11, for the Water Line Replacement in Dodson Area project in Houston, Texas.

The project consists of water line replacement at select streets and the project will typically be referred to as “project alignment(s)” in this document. The project alignment consists of portions of several streets in the Dodson Area, Area 1 in Houston, Texas. The Phase I ESA covers additional alignment including: Keeland Street, east of Lavender Street; US Highway 59-North frontage Road from Laura Koppe to north of Keeland Street; Dobson Street from Keeland Street to Weaver Road; Magna Street from Weaver Road to its southern extent; and Monet Street/Vine Street from Persimmon Street to Toliver Street to US Hwy. Frontage road to north side of East Crosstimbers Road. A few pole-mounted transformers were observed at select areas of the project alignment. No discoloration of vegetation or soil was observed along the project alignment. Some dumping and stockpiled debris was observed in a few areas along the project alignment.

The adjacent properties bordering were observed to be predominantly single family residential uses. A church also was noted adjacent to the project alignment. Commercial uses are present in select areas of the project alignment.

A summary of the findings for the project alignments are provided below. Additional details are provided in the text of the report. The complete report should be reviewed to provide and adequate or more comprehensive background of the Phase I ESA as it pertains to the Executive Summary.

The regulatory database search reported the following within the designated search range:

- Two (2) CERCLIS facilities.
- One (1) TCEQ Texas Voluntary Cleanup Program (TxVCP) facility/site.
- Five (5) Leaking Petroleum Storage Tank (LPST) facilities.
- Six (6) registered petroleum Underground Storage Tank (UST) facilities.

Please refer to *Section 6.0* Regulatory and Governmental Record Search for additional details concerning regulatory facilities and listings.

1.1 FINDINGS AND CONCLUSIONS

Based on the project alignment reconnaissance, aerial photos interpretation, regulatory data search, USGS, Sanborn and other map reviews, historical city directories and information obtained during this Phase I ESA, the following potential recognized environmental conditions was noted:

- *One (1) LPST facility, Teddy's Food Mart/Chevron (7702 Eastex Freeway) was identified adjoining the southern portion of the project alignment for US Hwy. 59 at East Crosstimbers Road. The facility is situated at the northwest corner of US Hwy. 59 and East Crosstimbers Road. The facility is an active gasoline service. Based on the regulatory information, the facility was reported to have groundwater impact. The property has been occupied by gas stations since the mid 1970s.*

- One PST facility, Former Sunmart No. 284/Texas Totem (3616 Laura Koppe Road) was located adjoining the US Hwy. 59 at Laura Koppe project alignment. The facility is no longer active. The facility has been demolished/removed. Some of the property of the facility appears to have been incorporated into Hwy 59. The facility was present on the southeast corner of Laura Koppe Road and Hwy. 59. The presence of a gas station at the property appears to date back to the early 1960s. Two LPST facilities are also present to the west of the location. Gas stations have been present on three of the four corners at the location.

1.2 RECOMMENDATIONS

Based on the Phase I ESA study according to ASTM E1527-05 standards as modified by the City of Houston Department of Public Works & Engineering, Infrastructure Design Manual Chapter 11, Associated Testing Laboratories recommends performing subsurface sampling (Limited Phase II ESA) along the proposed water line alignment, near the LPST facility/active PST facility and one former PST facility to determine the extent of contamination or impact these sites have had on the project alignment. The following facilities of potential recognized environmental conditions (RECs) were noted:

- One (1) LPST facility Teddy's Food Mart/Chevron (7702 Eastex Freeway) was identified adjoining the project alignment. Sampling and analyses is considered warranted. Laboratory analytical testing should include MTBE/BTEX and TPH analyses.
- One (1) PST facility, Former Sunmart No. 284/Texas Totem (3616 Laura Koppe Road) was identified adjoining the project alignment. Sampling and analyses is considered warranted. Laboratory analytical testing should include MTBE/BTEX and TPH analyses.

2.0 **INTRODUCTION**

2.1 **General**

The Phase I ESA was authorized KUO & Associates, Inc., with the acceptance of ATL's proposal EP14-601 October 6, 2014. The client provided locational details concerning the project alignment to ATL. This Phase I ESA includes: a project alignment reconnaissance, review of the available federal and state environmental databases, review of available historical aerial photographs, historical city directories, Sanborn maps (if available), topographic maps, local soil, geology, flood plain information and other public records, interviews with the present occupants around the project alignment, and our conclusions and recommendations regarding the potential for environmental concerns along the project alignment and the need for further investigation.

2.2 **Purpose**

The purpose of this assessment was to identify the presence or absence of any Recognized Environmental Conditions that may pose an environmental threat to the project alignment. The objective of the Phase I ESA was as follows:

- Identify Recognized Environmental Conditions (RECs);
- Identify the potential risk to the health and well being of the public and workers;
- Evaluate the need for additional investigation and/or testing.

2.3 **Detailed Scope-of-Work**

The scope of our work follows the ASTM E1527-05 includes the following:

- Review the available federal and state environmental databases such as Federal National Priority List (NPL), Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS), CERCLIS facilities/sites designated as No Further Remedial Action Planned (NFRAP), Resource Conservation and Recovery Act (RCRA), Corrective Action Activity (CORRACTS) facilities/sites, Federal RCRA Treatment, Storage, and Disposal Facilities (TSDF) facilities, RCRA Generators, Emergency Response Notification System (ERNS) listings, Leakage Petroleum Storage Tanks (LPST) facilities, Voluntary Cleanup (VCP) facilities/sites, Underground Storage Tanks (UST) facilities/sites.
- Review of available historical aerial photographs and USGS maps dating back to at least 1940s, if available. Review of local soil, topography, geology, flood plain information, and other available public records (i.e. local Fire Department).
- Perform visual inspection of the project alignment area's condition and the vicinity for the purpose of identifying structures or other improvements, natural bodies of water, wastewater discharges, ASTs and USTs, evidence of hazardous substances including stained soil, dead or stressed vegetation, odors and other observations that may indicate chemical releases.
- Conduct interviews with the available individuals (present owners, tenants, and/or employees) with knowledge of the project alignment area. Also, conduct interviews or request information from individuals familiar with the project alignment area, and/or regulatory agency personnel.
- Provide one (1) copy and one (1) electronic copy of this Phase I ESA report according to the protocol suggested by the client and containing all the procedures utilized and findings.

2.4 **Disclaimer**

This environmental assessment has been completed by ATL using commonly accepted professional practices and guidelines. However, no implicit or explicit warranty or guarantee can be given that its performance of the services according to the above scope will identify all violations or potential violations of federal, state, or local laws, regulations or ordinances that pertain to or may pertain to environmental protection matters. Investigation of subsurface and groundwater contamination is not considered part of this Phase I ESA.

3.0 PROJECT ALIGNMENT RECONNAISSANCE

3.1 Legal Description

A legal description has not been provided to ATL.

3.2 Project Alignment Investigation

ATL's environmental professional conducted the project alignment reconnaissance on October 29, 2014. The visit includes conducting a vehicle and walking visual inspection of each project alignment for the presence of any hazardous substances on or along the project alignment. A reconnaissance of the adjacent land-use was also conducted.

3.3 Project Alignment Description

The water line project alignment is located along and within existing streets. The streets are predominantly stabilized asphalt road with open ditches. The US Highway 59-North (Eastex Freeway) frontage/service feeder road that is part of the project alignment is concrete paved with curb inlets and below surface storm sewers. The project consists of water line improvements to select portions of streets located at the southeast quadrant of US Highway 59/69-North (Eastex Freeway) at Laura Koppe Road and East Crosstimbers Road vicinity and Lavender at Keeland Street vicinity. This Phase I ESA covers additional water line alignment additions to an existing water line project.

Project alignment maps and site photographs are presented in Appendix-A.

3.4 Adjacent Properties Description

The project alignments are predominantly bordered by single family residential, some multi-family residential uses and some commercial uses (service-related businesses). Bordering land of the streets range from impervious cover (concrete, concrete sidewalk) or stabilized material (rock and/or paver) or vegetation. The bordering land's vegetation consists of St. Augustine, landscaping and trees. Storm water generally flows toward open ditches on adjoining, adjacent and nearby streets. At US Hwy 59-N area, curb inlets and below surface storm sewer provide storm water drainage. The storm sewers and open ditches eventually outfall to a Harris County Flood Control District drainage system. A few pole-mounted transformers were observed at select areas of the project alignment. No discoloration of vegetation or soil was observed along the project alignment. Some dumping and stockpiled debris was observed in a few areas along the project alignment.

3.5 Hazardous Materials Identification

3.5.1 Storage Tanks

No physical evidence of Underground Storage Tanks such as vent pipes, pump dispensers, fill pipes, access manholes or ancillary equipment, generally representative of underground storage tanks, was observed on the project alignment. One adjoining former gasoline service station (3616 Laura Koppe Road) and one adjoining active Teddy's Chevron gasoline service station (7702 Eastex Freeway) were observed along the project alignment.

Although reasonable efforts have been made within the scope of this Phase I ESA to identify the presence of above and Petroleum Storage Tanks and ancillary equipment, it is important that ATL's clients understand the following limitations to this report with regard to PST issues. "Reasonable efforts" are defined for purposes of this document as limited information gained by visual observation of unobstructed areas and recorded database information provided to ATL by subcontractors.

This practice is considered industrial standard and does not preclude the actual presence of subsurface equipment (including actual underground petroleum storage tanks) which are hidden from view due to the historical activity along the project site such as: paving, construction, ground vegetation or debris pile storage. This limitation is not intended to decrease the findings of this report but to make our clients aware of innate limitations of a Phase I ESA, which by definition is visual and limited in nature.

3.5.2 Oil & Gas Survey

Oil & Gas Survey is a records search for current and/or historic oil and gas wells. No evidence of oil and gas wells was identified on the project alignment(s).

3.5.3 Polychlorinated Biphenyl (PCB) Investigation

PCBs are toxic coolants or lubrication oils used in some electrical transformers, light ballast, or other similar equipment. If present, transformers are inspected for obvious leaks and physical evidence such as stains or cracks indicating possible current or past leaks. The Environmental Protection Agency (EPA) under the Toxic Substance Control Act (TSCA) regulates PCB-containing or contaminated electrical equipment.

Pole-mounted transformers were observed at select areas of the project alignment. No discoloration of vegetation or soil was observed along the project alignment.

3.5.4 Disposal Practices

Minor disposal or dumping activities were observed at the project alignment at the time of our reconnaissance.

4.0 PROJECT ALIGNMENT BACKGROUND

4.1 Interviews

ATL's environmental professional attempted to interview Mr. Ali Nasruddin. Teddy's Food Mart/Chevron gasoline station-convenience store (7702 Eastex Freeway, Houston TX). ATL's environmental professional was not able to establish contact with the business enterprise (Tel. 713-692-2009).

ATL's environmental professional interviewed Suzy with O'Reilly Auto Parts store (3621 Laura Koppe Road, Houston TX). She indicated that she was not familiar with the history of the area. She did not understand the request and/or had no information concerning environmental conditions at the business/property (Tel. 713-691-0282).

ATL's environmental professional interviewed Danny with Motel King (3618 Laura Koppe Road, Houston TX). He indicated that he was not familiar with the history of the area. He did not understand the request and/or had no information concerning environmental conditions at the business/property (Tel. 713-691-0300).

ATL's environmental professional interviewed Heme with Regency Inn & Suites (3617 East Crosstimbers Road, Houston TX). She indicated that to the best her knowledge, she was not aware of any environmental conditions at the business/property (Tel. 713-692-6160).

4.2 Current and Past Ownership of Project Alignment

A fifty (50)-year chain-of-title was not obtained and reviewed for the project alignment and was not as part of the scope of this Phase I ESA. ATL will obtain this information from a third party at an additional cost at the request of the client. The client also must provide a legal description(s) and current owner(s) information to allow the information to be obtained. Unless pre-requested by the client, historical ownership review is outside the scope of this Phase I ESA.

4.3 Current Use of the Project Alignment

The project alignment is a proposed water line replacement project present in road right-of-ways (ROWs).

4.4 Past Use of the Project Alignment

All the streets have been used for transportation purposes with some improvements throughout the years. The following reasearch activities established a historical background for the site:

4.5 Historical Records Review

4.5.1 Aerial Photographs

Aerial photographs of the project alignment for the following years were available for review: 1944, 1953, 1966, 1973, 1979, 1982, 1989, 1995, 2005, 2010 and 2012. The review of the aerial photographs was generally restricted to areas on and adjacent to the project alignments. The summary is presented below:

1944 Aerial Photographs

The project alignment had residential development in the Dodson area. A racetrack can be seen to the north.

1953 Aerial Photograph

Residential development continued in the area.

1966 Aerial Photograph

By 1966, US Highway 59-North (Eastex Freeway) was present and would be improved over time. Based on topographic maps, the highway was present by 1955. Some commercial development had commenced along parts of US Hwy. 59. Other road improvements had occurred in the area. Commercial development also was occurring along Laura Koppe and E. Crosstimbers Roads. A gas station now was present on the southeast corner of US Hwy. 59-N and Laura Koppe Road.

1973 and 1979 Aerial Photographs

Gas stations were now present at three corners (NW, SW and SE) of US Hwy 59-at N. at Laura Koppe Road; and one was present along the project alignment at the southeast corner of US Hwy 59-N and Laura Koppe Road. A gas station was also noted to be present near the southeast corner of US Hwy. 59-N at East Crosstimbers Road. By 1979, another gas station also appears to have been present near the northeast corner of US Hwy. 59-N at East Crosstimbers Road and along the alignment. Commercial development had continued in the area.

1982 and 1989 Aerial Photographs

An office/warehouse facility had developed to the east of the southern extent of Magna Street. The gas station near the southeast corner of US Hwy. 59-N and

E. Crosstimbers Road appeared to have been removed from service.

1995 Aerial Photograph

The Eastex Freeway (US Highway 59-North) was undergoing reconstruction and widening. The highway added significant capacity to this expressway. The design also continued to improve west-east transit with improved bridges and underpasses. The expansion would displace several adjoining land-uses. The gas stations were predominantly removed from service at Laura Koppe Road.

2005 and 2010 Aerial Photographs

A church had developed along the east side of US Hwy 59-N south of Keeland Street. A few hotels had been established in project area. An auto parts store now was present on the northeast corner of Laura Koppe and US Hwy. 59.

2012 Aerial Photograph

A Chevron Station was constructed an old gas station property on the northeast corner of E. Crosstimbers and US Hwy. 59-N (former Exxon Station).

Project Alignment Observations

No abnormalities or discrepant activities at or adjacent to the project alignment can be seen, according to available aerial photographs. Adjoining and nearby historic gas stations were noted at the project alignment. One active gas station remains along the project alignment.

Copies of the aerial photographs are presented in Appendix-B.

4.5.2 Fire Insurance Maps (Sanborn Maps)

In the late nineteenth century, private companies began preparing maps of central business districts for use by fire insurance companies. These maps were updated and expanded geographically periodically throughout the twentieth century. The maps often indicate construction materials of specific building structures and the location of gasoline storage tanks.

Sanborn Historical Maps were researched along the project alignment area. Sanborn Map coverage was not available for the project area.

Reproductions of any and all documents related to Sanborn Historical Maps are presented in Appendix-C.

4.5.3 City Directories

Polk and Cole and other historical city directories were researched by EDR for the project alignment. Business directories including city, cross-reference and telephone directories were reviewed, if available, in approximately five-year intervals. A review of the city directories revealed that there are commercial facilities, residential bordering the project alignments. The city directory information and historical EDR information was crosschecked for limitations. A copy of the city directories is presented in the Appendix-C. Based on the EDR data, the following was noted:

- Standard City directory and proprietary historical information did not indicate facilities of potential environmental concern that were not indicated in the regulatory database or cross-referenced.

5.0 ENVIRONMENTAL SETTING

5.1 Regional Geology

Harris County is in the Western Gulf section of the Coastal Plain. The uppermost formations, from which the parent materials of soils in the county weathered, are Pliocene, Pleistocene, and Holocene (Recent) age. These formations were deposited in fluvial, deltaic, coastal marsh, and lagoonal soil materials and shallow sea environments.

Among the geologic and geomorphic features in the county are sedimentary deposits broken by normal faults, salt domes, pimple mounds, un-drained depressions and scarps.

The sedimentary deposits slope gently toward the Gulf of Mexico. They are broken by normal faults most of which dip toward the Gulf and extend downward many thousands of feet. The earth movements that caused these faults took place within the last 50,000 years.

As Harris County has become urbanized, some of the faults have become reactivated, resulting in damage to pavement and to houses. Also, as pumping has withdrawn large amounts of groundwater and lowered the artesian pressure in aquifers, the clay layer that once enclosed the aquifers has dried and compacted, which can cause subsidence.

The local geology of the project alignment area is underlain by the Beaumont Formation of Pleistocene age. This formation consists of clays, silt, and sand. The sedimentary composition of the Beaumont formation consists of series of coalescing alluvial, deltaic, and coastal inter-deltaic plains developed by the major rivers and coastal processes during high standing sea level of the inter-glacial stage. The general thickness of Beaumont Formation is approximately 100 feet.

5.2 Soils

According to the United States Department of Agriculture (USDA), Soil Conservation Services (SCS), State Soil Geographic (STATSGO) data, the soil component at the project alignment consists of the Clodine-Urban land complex (Ce) and Gessner-Urban land complex (Gu). Details of the soil strata are given below respectively.

The Clodine-Urban land complex (Ce) soils are described as being nearly level (low relief), broad irregular-shaped areas that generally range from twenty (20) to several hundred acres in size. The Clodine soil is considered hydric in depressional areas. The slope of the soil terrain is usually 0 to 1 percent, but averages at 0.6 percent. Pine and hardwoods have encroached in some areas and in some areas trees have been planted for shade or wind breaks. The Clodine soil is considered to consist of twenty percent (20%) to eighty five percent (85%) of the complex. The Urban soil consists of ten percent (10%) to seventy five percent (75%) of the complex. These percentages are expected to be out-of-date. The Ce soil is described as: the surface layer is friable, dark gray loam, in the upper part of the layer the soil is neutral, in the lower part of the layer the soil is moderately alkaline. The layer is from surface to twelve (12") inches below surface. The next layer, twelve (12") to twenty-nine (29") inches is friable, moderately alkaline, gray loam. The next layer is friable, moderately alkaline, light brownish-gray loam that has irregular, pitted calcium carbonate. The Clodine-Urban land complex consists of Clodine soils and an Urban mapping unit. The Urban land mapping unit ranges from forty percent (40%) to sixty percent (60%) and from seventy five percent (75%) to one hundred percent (100%) land coverage with structures or disturbance. The Urban soils are generally not classified due to extensive land-use activities have made soil classification impractical. The soils are described as soils with extensive impervious cover, structures, buildings, roads, trenching, thus making the soil disturbed and difficult.

The Gessner-Urban land complex (Gu) soils are described as being nearly level (low relief), broad irregular shaped areas and located in depressions and generally range from fifteen (15) to one hundred and eighty (180) acres in size, but some areas are several hundred acres in size. The Gessner soil is considered hydric in depressional areas. The slope of the soil terrain is usually 0 to 1 percent. Water stands in depressions for long periods after precipitation. Some areas have pimple mounds. The mounds and depressions are leveled with development. Water oak, willow oak, hackberry, sweetgum and elm have encroached in some areas. The Gessner soil is considered to consist of twenty percent (20%) to eighty percent (80%) of the complex. The Urban soil consists of ten percent (10%) to seventy percent (70%) of the complex and the soil is somewhat layered. The Gu soil is described as: the surface layer is friable, slightly acidic, dark grayish-brown loam from surface to seven (7") inches below surface. The next layer, seven (7") to sixteen (16") inches is friable, slightly acidic, grayish-brown loam. The next layer, sixteen (16") to thirty-four (34") inches is friable, neutral, dark gray loam and is slightly clayey. The next layer, thirty-four (34") to fifty-three (53") inches is friable, moderately alkaline, light brownish-gray loam. The next layer to a depth of eighty-four (84") inches is firm, moderately alkaline, light gray sandy clay loam. The Gessner-Urban land complex consists of Gessner soils and an Urban mapping unit. The Urban land mapping unit ranges from forty percent (40%) to sixty percent (60%) and from seventy five percent (75%) to one hundred percent (100%) land coverage with structures or disturbance. The Urban soils are generally not classified due to extensive land-use activities have made soil classification impractical. The soils are described as soils with extensive impervious cover, structures, buildings, roads, trenching, thus making the soil disturbed and difficult to classify. This soil group has high shrink-swell potential and corrosivity to un-protected metals. Soils are sticky when wet and are not recommended for septic drainage fields. Roads need extensive stabilization and base material on this soil.

5.3 Groundwater

The hydrologic units that underlie Harris County are the Evangeline and the Chicot aquifers. In general, the groundwater gradient of these two aquifers is toward the southeast. The Evangeline aquifer is composed of Goliad sand and the Fleming formation has been identified as Pliocene and upper Miocene in age. This aquifer is the major source of groundwater in the Houston area. However, in Galveston and southern Harris County, it becomes saline and is not used. The top of the aquifer ranges in depth from 100 feet above mean sea level (MSL) in extreme northwest Harris County to 300 feet below MSL in the southwest Harris County. Maximum aquifer thickness is approximately 2,400 feet.

The Chicot aquifer (the youngest) includes all deposits from the land surface to the top of the Evangeline aquifer and is Pleistocene in age. It has been divided into an upper unit and lower unit. The upper unit is typically encountered in southern Harris County, and generally is not present in the northern section of the county. It is not considered a primary source of groundwater in Harris County. The lower unit of the Chicot aquifer is the main source of groundwater in Galveston and southern Harris County. Maximum thickness of the Chicot aquifer is approximately 600 feet. In addition to the primary aquifers, groundwater occasionally occurs in shallow, discontinuous, or "perched" water-bearing units. Shallow groundwater is typically encountered at depths less than 20 feet for the Houston area. The shallow groundwater units are generally utilized for local agricultural use in rural areas. Flow direction in these units is highly variable but is generally toward the down gradient water body (lakes, creeks, and rivers) and can be approximated by surface topography. Recharge area for these perched aquifers are very local, and they can be influenced by surface development of impervious cover (buildings, parking lots, roads), major road construction (underpasses, utility trenches), and variations in rainfall.

5.4 Flood-Prone Area

According to the EDR-derived FEMA Federal Insurance Rate Map (48201C), the project alignment is reported to be in **Non-Shaded Zone X**: Areas determined to be outside the 0.2% (500-year) annual chance floodplain.

A copy FEMA-derived EDR floodplain map is presented on the Detail Map in Appendix E.

5.5 Wetlands or Waters of the US

No on-site wetlands are indicated on available maps for the project. The project alignment does not appear to affect wetlands. The project crosses a flood control channel on Magna Street between Plaag and Persimmon Streets (potential waters of the US consideration). A preliminary wetlands or wetlands assessment was not conducted under the scope of this Phase I ESA.

A copy National Wetland Inventory-derived EDR wetland map is presented on the Detail Map in Appendix E.

5.6 Property Topography

The United States Geological Survey (USGS) Maps of Bellaire, Texas quadrangle reveals that this project alignment is approximately 62 to 65 feet above sea level. A review of the 1916, 1922, 1946, 1955, 1967, 1982 and USGS maps was performed.

In 1916, the area was rural and Old Humble Road was the main route for the immediate area. By 1946, residential and road development had increased in the area. By 1955, the area has similar characteristics as it does to date. By 1982, some additional improvements to US Hwy, 59-N had occurred and Tidwell Road had been improved. By 1995, US Hwy 59 continued to be improved and E. Crosstimbers had been improved. No variations in elevations or disturbances were observed.

Copies of the USGS Topographical Maps are presented in the Appendix D.

6.0 REGULATORY AND GOVERNMENT RECORD SEARCH

Environmental Data Resources, Inc. (EDR) performed a search of available regulatory and governmental agency listings including the most recent:

- US EPA NPL (National Priority List)
- US EPA RCRA TSD (RCRA Treatment, Storage & Disposal facilities)
- US EPA CORRACTS (RCRA Corrective Actions)
- US EPA CERCLIS/NFRAP (CERCLIS reviewed by the US EPA)
- US EPA ERNS (Emergency Response Notification System) & TEXAS SPILLS
- US EPA RCRA LQG (Large Quantity Generator of hazardous or regulated waste)
- US EPA RCRA SQG (Small Quantity Generator)
- TXSSF (Texas State Superfund)
- TCEQ SWLF or CLI and/or LFUN (Solid Waste Landfills, Incinerators, or Transfer Stations, Grand-fathered Closed Landfill Inventory or Non-permitted Waste Sites)
- TCEQ LPSTs (Leaking Petroleum Storage Tanks)
- TCEQ ASTs (Aboveground Storage Tanks)
- TCEQ USTs (Underground Storage Tanks)
- TCEQ TX VCP (Texas Voluntary Cleanup Program)
- TCEQ TX IOP (Texas Innocent Owner/Operator Program)
- TCEQ IHW (Industrial and Hazardous Waste)
- TCEQ Dry Cleaner (Dry Cleaner or Dry Cleaning-Related)

- BROWNFIELD

The following summarizes the results of the database search for environmental risks to the project alignment.

6.1 US EPA National Priorities List (NPL (Superfund))

The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. NPL sites may encompass relatively large areas. NPL is a list of uncontrolled or abandoned waste sites identified by the Federal Government (EPA) as having a priority for clean up under the Superfund Program. The NPL list appears in the Code of Federal Regulation, CFR 40, Parts 190 to 399.

Review of the regulatory listing, as provided by EDR, has revealed that there are no NPL facilities/sites located within a one-mile radius of the project alignment.

6.2 US EPA RCRA Treatment, Storage, and Disposal Facilities (TSDF)

The EPA's RCRA program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA list regulates hazardous waste generation, treatment, and storage or disposal activities specific to waste generators. Owners and operators of hazardous waste treatment, storage and disposal facilities must obtain a RCRA permit from EPA or an authorized State Agency and must comply with applicable regulations. The TSD facilities information is stored under the RCRIS database. The EPA's RCRIS serves to track the status of registrants, permits, reports, inspection, enforcement activities and violations of those facilities registered under RCRA.

Review of the regulatory listings, as provided by EDR, has revealed that there are no US EPA RCRIS TSD facilities/sites located within a one-mile radius of the project alignment.

6.3 State Superfund (TxSSF)

State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be sponsored for by potentially responsible party(ies).

Review of the regulatory listings, as provided by EDR, has revealed that there are no TxSSF facilities/sites located within a one-mile radius of the project alignment.

6.4 US EPA Comprehensive Environmental Response, Compensation and Liability Act Information System (CERCLIS)

The Comprehensive Environmental Response, Compensation and Liability Act Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). The Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) as amended by the Superfund Amendment and Reauthorization Acts of 1986 (SARA), deal with abandoned hazardous waste sites. CERCLIS contains sites that are either proposed to or on the National Priorities List (NPL) and sites that are in the screening and assessment phase for possible inclusion on the NPL.

The CERCLIS is a list compiled by the EPA of sites suspected of having violations involving hazardous, toxic, or regulated materials. In addition, the CERCLIS listing is a compilation of sites that the EPA has investigated or is currently investigating for a release or threatened release of hazardous substance. These sites are classified as

“Active” if enforcement or clean-up actions are ongoing; “Pending” if the site is still under review.

Review of the regulatory listings, as provided by EDR, has revealed that there are two CERCLIS facilities/sites located within a one-mile radius of the project alignment.

The first CERCLIS facility/site, Friendly Drum Site (8917 Friendly Street) is located on the west side of Friendly Street to the north of Laura Koppe Road. One March 30, 1994, approximately 34 drums were discovered at the location. Of the 34 drums, 15 were reported to be full. Some of the drums were reported to contain toluene diisocyanate. Some of the drums appear to have been leaking. By July 22, 1994, an EPA-funded removal event had been completed at the location. By October 9, 1997, a preliminary assessment had been completed at the site and the site was archived and was reported to be a no further action planned site. *The site has been previously proposed for additional evaluation as part of the larger project alignment area.*

The second CERCLIS facility/site, Atlas Smelting and Refining (6800 Brewster) was reported to be approximately 0.312-mile southwest of the project alignment. One December 7, 2011, an environmental condition was discovered at the facility. On November 14, 2012, a preliminary assessment had been completed at the facility and the facility was assigned a low hazard ranking. Based on the status and down gradient position of the facility to the project alignment, the CERCLIS facility/site is not a recognized environmental condition to the project alignment.

6.5 US EPA CERCLIS Designated No Further Remedial Action Planned (NFRAP)

NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund Action or NPL consideration.

These sites are classified as “No Further Remedial Action Planned” if the site is closed (cleaned up or neutralized), or poses no environmental risk. The identification of a site from the CERCLIS does not necessarily indicate legal activity nor is it a confirmation that no actual health or Environmental risk exists. An active CERCLIS site, which is under remediation, may be added to the National Priorities List (NPL), or may be listed with the Federal or State Superfund Registry. Unclassified sites of “No Further Action” facilities generally appear only on the CERCLIS list.

Review of the regulatory listings, as provided by EDR, has revealed that there are no CERCLIS/NFRAP facilities/sites located within 0.094-mile radius of the project alignment. One facility was reported, but is outside the search range.

6.6 US EPA Resource Conservation and Recovery Act (RCRA) CORRACTS

The EPA maintains this database of RCRA facilities, which are undergoing “corrective action”. A “corrective action order” is issued pursuant to RCRA Section 3008 (h) when there has been a release of hazardous waste or constituents into the environment from a RCRA facility. Corrective actions may be required beyond the facility’s boundary and can be required regardless of when the release occurred, even if it predates RCRA.

Review of the regulatory listings, as provided by EDR, has revealed that there are no CORRACTS facilities/sites located within 0.094-mile of the project alignment.

6.7 EPA Emergency Response Notification System (ERNS)

The ERNS list is a national database used to collect records and store information on reported releases of oil and hazardous substances. The ERNS system is compiled from reports of emergency responses to spills or discharges of hazardous materials, answered

either by the EPA or by local emergency personnel who later notified the EPA of the action. The sites are generally localized areas of temporary impact that have not been assigned to Superfund clean-up status, nor require National Priorities List (NPL) consideration. Typical listings include fuel spills associated with automobile accidents, or industrial spills of a limited nature (i.e., a single 55-gallon drum or smaller container of hazardous materials). The information provided fairly limited, but provides ATL with a numbered report or case by which further information possibly can be obtained, if necessary.

Review of the regulatory listings, as provided by EDR, has revealed that there are no ERNS listings located within a 0.094-mile radius of the project alignment.

6.8 TCEQ Leaking Petroleum Storage Tank (LPST)

TCEQ maintains a current list of LPST (Leaking Petroleum Storage Tank) sites and the list typically includes reported leaking petroleum storage tanks. Review of the regulatory listings, as provided by EDR, has revealed that there are five LPST facilities located within 0.094-mile radius of the project alignment(s). Adjustments were made to distances provided throughout the regulatory databases due to mapped boundary issues. Additionally, select facilities have been excluded due to the fact they are outside the specified search range (boundary issue).

LPST Facility	General Information	Status
<p>¹Former Exxon RAS No. 6-2694 (3511 Laura Koppe) 0.094-mile/NW</p>	<p>The facility was reported to have soil contamination (LPST ID No. 98963). The facility has been demolished/removed. Some of the property of the facility appears to have been incorporated into Hwy 59. Please refer to the following PST section for additional details concerning the facility. One 12,000 gallon gasoline, two 10,000 gallon gasoline and one 8,000 gallon gasoline fiberglass reinforced plastic (FRP) USTs have been permanently removed from the ground at the facility.</p>	<p>Final Concurrence Issued, Case Closed</p>
<p>¹Former Shell Station (3514 Laura Koppe Rd.) 0.075-mile/W</p>	<p>The facility was reported to have groundwater impact (LPST ID No. 104406). The facility has been demolished/removed. Some of the property of the facility appears to have been incorporated into Hwy 59. Please refer to the following PST section for additional details concerning the facility. Three 10,000 gallon gasoline FRP USTs have been permanently removed from the ground at the facility. Hydraulic lifts also were referenced to the facility.</p>	<p>Final Concurrence Issued, Case Closed</p>
<p>Sunrise Gas & Food (8330 Eastex Freeway) 0.075-mile/W</p>	<p>The facility was reported to have groundwater impact (LPST ID No. 114176). The facility is not active (vacant), and the old station structure remains on-site The</p>	<p>Final Concurrence Issued, Case Closed.</p>

	facility is not identified as an REC. Three 8,000 gallon gasoline and one 4,000 gallon diesel steel USTs have been permanently removed from the ground at the facility.	
Teddy's Food Mart/Chevron (7702 Eastex Freeway) Adjoining	The facility was reported to have groundwater impact (LPST ID No. 97111). The facility is active. One 30,000 gallon and one 16,000 gallon compartmentalized composite USTs are active at the facility (3-gas & 1-diesel). Two 8,000 gallon gasoline, one 6,000 gallon gasoline and one 500 gallon used oil steel USTs have been permanently removed from the ground at the facility. Based on the close proximity to the project alignment, additional work is warranted.	Final Concurrence Issued, Case Closed * <u>Suspect REC</u> . Historic gas stations have been present at the location (Exxon).
Former Chevron No. 60108031 (8330 Eastex Freeway) 0.056-mile/S	The facility was reported to have groundwater impact (LPST ID No. 92205). The facility has been demolished/removed. Based on the status and down gradient location of the facility to the project alignment, the facility is not an REC. Three 10,000 gallon gasoline and one 550 gallon used oil FRP USTs have been permanently removed from the ground at the facility. The facility was originally a Gulf Oil Corp. service station (1975-85), then Chevron. The facility also has a TxVCP listing and the facility/site has a ² groundwater contamination case (GCC) listing.	Final Concurrence Issued, Case Closed.

The above indicated “*” facility is considered to be a suspect REC to the project alignment. ¹Please refer to the following section (Section 6.10) related to this location. ²Please refer to the Section 6.13 related to this location.

6.9 Solid Waste Landfill Site (SWL/LF)

The State of Texas maintains a list of permitted solid waste landfills, incinerators or transfer stations.

Review of the regulatory listings, as provided by EDR, has revealed that there are no SWL sites are located within 0.094-mile radius of the project alignment. A CLI site, Tony Muniz (7209 Sayers) is present approximately 0.40-mile south of the southern extent of Magna Street.

6.10 TCEQ Underground Storage Tank (UST) & Aboveground Storage Tank (AST)

UST's are registered under Subtitle 1 of the Resource Conservation and Recovery Act (RCRA) and must be registered with the state department responsible for administering the UST & AST program. TCEQ maintains a current list of UST sites and the list typically includes reported petroleum storage tanks.

Review of the regulatory listings, as provided by EDR, has revealed that there are six registered petroleum UST facilities located within 0.094-mile mile radius of the project alignment. Five (5) of the six (6) PST facilities have been previously discussed in the above LPST Section (Section 6.8). The remaining facility is as follows:

The UST facility, Sunmart No. 284/Texas Totem (3616 Laura Koppe Road) was located adjoining the US Hwy. 59 project alignment (Fac. ID No. 56357). The facility is no longer active. Some of the property of the facility appears to have been incorporated into Hwy 59. The facility was present on the southeast corner of Laura Koppe Road and Hwy. 59. Three 8,000 gallon gasoline USTs have permanently removed from the ground at the facility. ¹Two historic gas stations/LPST facilities (3511 & 3514 Laura Koppe Road) also were noted to the west of this location. Based on the proximity of the facility to the project alignment, the presence of two nearby LPST facilities and the fact three corners have been historically occupied by gas stations, additional work is warranted, and the facility is an REC. The facility dates back to 1962.

6.11 US EPA RCRA-Small Quantity Generator (SQG) & Large Quantity Generator (LQG)

Review of the latest RCRA - SQG and RCRIS-LQG listings, as provided by EDR, revealed are three (3) SQG & LQG facilities are within 0.094-mile mile radius of the subject site. Dry Cleaners, Photographic Developers, and Producers/Transporters of Hazardous Waste (under monthly limit) are types of businesses that can be found within this review. TCEQ Hazardous Waste (HW) listing also are included. With the exception of the previously discussed Koenig Pit & Liquid Waste listing, no RCRA Generators, notifiers/handlers or TCEQ HW listings were reported within 0.094-mile of the project alignment.

6.12 Texas Spills

The TCEQ Spill Response database is compiled from reports of emergency responses to spills or discharges of hazardous materials, answered either by the Texas Commission on Environmental Quality or by local emergency personnel who later notified the TCEQ of the action. The sites are generally localized areas of temporary impact, which have not been assigned to ongoing cleanup status or require State Cleanup List or National Priorities List (NPL) consideration.

Review of the regulatory listings, as provided by EDR has revealed that there are no SPILLS listings located within 0.094-mile radius of the project alignment.

6.13 TCEQ Voluntary Cleanup Program (VCP)

The TCEQ Voluntary Cleanup program provides administrative, technical, and legal incentives to encourage the cleanup of contaminated sites in Texas. Also under the VCP, site cleanups follow a streamlined approach to reduce future human and environmental risk to safe levels. Any site not subject to an order or permit from the TCEQ is eligible to enter the VCP, except in cases where TCEQ enforcement action is pending. The VCP database represents dry cleaners, manufacturing facilities, shopping centers, warehouses, auto-related businesses, and other commercial and industrial enterprises.

Review of the regulatory listings, as provided by EDR, has revealed that there is one VCP facility/site located within 0.094-mile radius of the project alignment.

The TxVCP facility/site, ²Chevron No. 60108031 (7610 Eastex Freeway) is situated on the southeast corner of the Eastex Freeway and E. Crosstimbers Road (TxVCP No. 599). The applicant has withdrawn from the program. The listing references a 0.544-acre tract. The contaminant is petroleum hydrocarbons related to PSTs. Soil and groundwater was reported to have been affected. The site is also has a groundwater contamination case listing indicating the relic contamination exists that may exceed MCLs. Sampling is

proposed from the facility at the northeast corner of the Eastex Freeway and E. Crosstimbers Road.

6.14 TCEQ Innocent Owner or Operator (IOP)

An IOP is an innocent owner or operator whose property is contaminated as a result of release or migration of contaminants from a source or sources not located on the property, and they did not cause or contribute to the sources of contamination.

Review of the regulatory listings, as provided by EDR, has revealed that there are no IOP facilities/sites located within 0.094-mile radius of the project alignment.

6.15 Dry Cleaners

Dry cleaners and dry cleaning related enterprises are required to be registered. The database tracks and provides location details for the facilities. Registration fees also support remedial action on select dry cleaning facilities (dry cleaning remedial program).

Review of the regulatory listings, as provided by EDR, has revealed that there are no registered dry cleaning-related facilities located within 0.094-mile radius of the project alignment.

6.16 Brownfields

Brownfields are properties or sites that state or Federal funding has been granted in an attempt to return an adversely-affect property back to usable condition.

Review of the regulatory listings, as provided by EDR, has revealed that there are no Brownfields located within 0.094-mile radius of the project alignment.

A copy of the regulatory listings provided by EDR is presented in Appendix-E.

7.0 CONCLUSIONS

Based on the project alignment reconnaissance, aerial photos interpretation, regulatory data search, USGS, Sanborn and other map reviews, historical city directories and information obtained during this Phase I ESA, the following potential RECs were noted:

- One (1) LPST facility, Teddy's Food Mart/Chevron (7702 Eastex Freeway) was identified adjoining the southern portion of the project alignment for US Hwy. 59 at East Crosstimbers Road. The facility is situated at the northwest corner of US Hwy. 59 and East Crosstimbers Road. The facility is an active gasoline service. Based on the regulatory information, the facility was reported to have groundwater impact. The property has been occupied by gas stations since the mid 1970s.
- One PST facility, Former Sunmart No. 284/Texas Totem (3616 Laura Koppe Road) was located adjoining the US Hwy. 59 at Laura Koppe project alignment. The facility is no longer active. The facility has been demolished/removed. Some of the property of the facility appears to have been incorporated into Hwy 59. The facility was present on the southeast corner of Laura Koppe Road and Hwy. 59. The presence of a gas station at the property appears to date back to the early 1960s. Two LPST facilities are also present to the west of the location. Gas stations have been present on three of the four corners at the location.

8.0 RECOMMENDATIONS

Based on the Phase I ESA study according to ASTM E1527-05 standards as modified by the City of Houston Department of Public Works & Engineering, Infrastructure Design Manual Chapter 11, Associated Testing Laboratories recommends performing subsurface sampling (Limited Phase II ESA) along the proposed sewer line alignment, near the LPST facility/active PST facility and one former PST facility to determine the extent of contamination or impact these sites have had on the project alignment. The following facilities of potential recognized environmental conditions (RECs) were noted:

- One (1) LPST facility Teddy's Food Mart/Chevron (7702 Eastex Freeway) was identified adjoining the project alignment. Sampling and analyses is considered warranted. Laboratory analytical testing should include MTBE/BTEX and TPH analyses.
- One (1) PST facility, Former Sunmart No. 284/Texas Totem (3616 Laura Koppe Road) was identified adjoining the project alignment. Sampling and analyses is considered warranted. Laboratory analytical testing should include MTBE/BTEX and TPH analyses.

9.0 QUALIFICATIONS OF INTERPRETATIONS

The methodology used in this investigation has been consistent with those normally employed for projects of this type. The report was prepared based on documented information and information obtained during the project area reconnaissance.

The interpretations provided are based in part on information provided to us and these only apply to the specific discussed in this report. If the information in this report needs to be updated or if additional information is available, you should convey the information to us and retain us to review our interpretations. We can then modify our interpretations after considering the updated information for this project.

Under no circumstances does Associated Testing Laboratories, Inc. accept responsibility for conditions at the subject property, whether those conditions are identified in this report or not.

We will be happy to discuss our findings with you and would welcome the opportunity to provide additional studies or services necessary to complete any future projects.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Associated Testing Labs were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1921 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR is licensed to reproduce certain City Directory works. Reproduction of City Directories without permission of the publisher may be a violation of copyright.

OVERVIEW MAP - 04113429.2R

-  Target Property
-  Sites at elevations higher than or equal to the target property
-  Sites at elevations lower than the target property
-  Manufactured Gas Plants
-  National Priority List Sites
-  Dept. Defense Sites
-  Indian Reservations BIA
-  Oil & Gas pipelines from USGS
-  100-year flood zone
-  500-year flood zone
-  National Wetland Inventory

This report includes Interactive Map Layers to display and/or hide map information. The legend includes only those icons for the default map view.

FEMA MAP Part I

SITE NAME: Dodson Area
 ADDRESS: 9010 Dodson Street
 Houston TX 77093
 LAT/LONG: 29.8331 / 95.332

CLIENT: Associated Testing Labs
 CONTACT: Priti Singh
 INQUIRY #: 04113429.2r
 DATE: October 23, 2014 10:00 am

DETAIL MAP - 04113429.2R

-  Target Property
-  Sites at elevations higher than or equal to the target property
-  Sites at elevations lower than the target property
-  Manufactured Gas Plants
-  Sensitive Receptors
-  National Priority List Sites
-  Dept. Defense Sites
-  Indian Reservations BIA
-  Oil & Gas pipelines from USGS
-  100-year flood zone
-  500-year flood zone
-  National Wetland Inventory

GEOCHECK[®] - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

DODSON AREA
9010 DODSON STREET
HOUSTON, TX 77093

TARGET PROPERTY COORDINATES

Latitude (North):	29.8331 - 29° 49' 59.16"
Longitude (West):	95.332 - 95° 19' 55.20"
Universal Tranverse Mercator:	Zone 15
UTM X (Meters):	274672.4
UTM Y (Meters):	3302394.2
Elevation:	61 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	29095-G3 SETTEGAST, TX
Most Recent Revision:	1995

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

APPENDIX - F

*Professional
Qualifications*

TOM MURPHY
PROJECT MANAGER
ENVIRONMENTAL ENGINEERING SERVICES

EDUCATION

Texas State (formerly Southwest Texas State University): B. S., Geography-Resource and Environmental Studies/Biology, 1993

REGISTRATION/TRAINING

40/8-Hour CFR 1910.120, OSHA Training and Refreshers (HazWop)
40 CFR 265.16, Hazardous Waste Management Certification
49 CFR 172 & 173, DOT Hazardous Materials Training
29 CFR 1919.134, Respirator Fit Test/Training
RRC Rule 36 & API-RP 49, Hydrogen Sulfide Training
ExxonMobil LPS and OIMS Training
Facility, Client or Site-Specific Safety Training and Protocols

PROFESSIONAL EXPERIENCE

Project Manager
Project Geologist/Scientist/Manager
Field Geologist
Bioremedial Field Engineer
Specialization:
Spill response and assessment/remediation to closure
Environmental site assessments
Remediation systems installation and system design
General construction experience
Regulatory and data interpretation
Surveying/mapping/site plans

PROFESSIONAL HISTORY

Associated Testing Laboratories, Inc., Contract Environmental Professional/Project Manager, Sept. 2013 to present
Berg-Oliver Associates, Inc., Project Manager, November 2004 to present
BNC Environmental Svs., Inc. (successor CRA), Project Geologist/Scientist/Manager, Oct. 2001 to Nov. 2004.
Eco-Systems, Inc., Project Scientist, March 2001 to October 2001.
Self-Employed, Environmental Consultant/Scientist, November 2000 to March 2001.
Associated Environmental Consultants, Inc., Project Manager, August 1995 to November 2000.
Self-Employed, Environmental Consultant, April 1995 to August 1995.
Sybron Chemicals, Inc., Bioremedial Field Engineer, October 1993 to April 1995.

REPRESENTATIVE EXPERIENCE

Mr. Murphy is a mid to senior-level project manager with over 18 years of diverse environmental experience. Mr. Murphy's responsibilities include: project management activities, conducting surface and/or subsurface soil groundwater investigations, Phase II ESAs, Phase IIIs, Affected Property Assessment Reports (APARs), spill response and environmental management, conducting over twenty six hundred Phase I ESAs/due diligence, transaction screens, wetland projects (delineation, nationwide and individual permits), road (new and reconstruction) and infrastructure (waterlines, sanitary sewer and storm sewer) projects and other environmental-related tasks. Experience and preparation of cost proposals, project coordination, health and safety plans and supervisory duties of sub-contractors, bioremedial equipment project design/set-up, various remediation technology projects, equipment and design for treating petroleum-contaminated soil and groundwater, equipment set-up/construction, QA/QC, monitor well advancement, supervision of sampling discharge effluents and storm water, groundwater monitoring supervision, EPA/TCEQ & RRC protocol, expediting projects, treatability studies and contaminant plume mapping. He has project experience in field assessments and remediation projects for banks, developers, brokers, institutions, companies, corporations, engineering firms/government entities (city of Houston,

HCPID-AED and other cities) and the Texas Commission on Environmental Quality Leaking Petroleum Storage Tank (LPST) RPR Division. Mr. Murphy excels in the application of technical knowledge, site-specific factors, data analysis, report preparation to existing and potential clients. Knowledgeable in government environmental acts and regulations. Representative projects include:

- Performed numerous Subsurface Investigations and Phase II-Environmental Site Assessments for various clients to determine the presence or absence of adverse environmental conditions.
- Conducting spill response activities and delineations predominantly for pipeline-related enterprises and bulk storage facilities inclusive of: air monitoring, subcontractor supervision, excavation and over-excavation, sampling, waste disposal (waste profiling/characterization, transportation and disposal), reporting and closure under Railroad Commission of Texas or TCEQ. Representative clients:
 - ❑ ExxonMobil Pipeline Co. (EMPCo.)
 - ❑ BP Pipelines North America (NA), Inc.
 - ❑ Valero Logistics Operations, L.P.
 - ❑ Kinder Morgan
 - ❑ Shell Oil Products US, Equiva, Motiva and Equilon
 - ❑ TEPPCO
- Prepared a pilot project leading to a contracted waste water line build-up treatment plan, technical documents, cost proposal for the City of Houston (waste water line bioremediation).
- Conducted numerous new road, road reconstruction, waterline alignments, sanitary sewer alignments, storm sewer alignments and Limited Environmental Assessment projects for the City of Houston Public Works and Engineering Department, Harris County Public Infrastructure Department-Architecture and Engineering Division and Engineering Firms and other numerous linear projects (TxDOT (State CE, CE and support for LEAs).
- LPST remediation equipment set-up and design, petroleum contaminant reduction, TCEQ approved closure of several LPST sites and supervision of LPST sites.
- Experience in all phases of construction including bioremedial equipment installation, sampling protocol of water and/or soils, and closure of project site. Field Engineer for numerous site assessments throughout the Gulf Coast region. Construction of bioremediation systems to convert pump and treat contaminated ground water including recovery/treatment/microbe and nutrient injection systems. Projects:
 - ❑ Houston Lighting & Power-Spring Branch, Houston, bioreactor system; and
 - ❑ Wilburforce Road, Houston-First Interstate (successor Wells Fargo Bank), bioreactor.
- Field experience with soil injection, bioreactors, air strippers, and vacuum heaps and air sparging to treat soil/groundwater contaminants. Field Engineer for various remediation projects of oil and petroleum-contaminated soils. Field experience in soil vapor extraction equipment (SVE) including a specially designed bio-treated fluid separator. Constructed a vapor extraction system with a biological scrubber to extend carbon polishing efficiency and/or the potential for breakthrough or fugitive releases, and reduction of overall total emissions. System also included method to remove groundwater from vapor extraction wells, which tended to accumulate due to excessive rainfall and shallow groundwater effects. Constructed, maintained and operated landfarms for various clients. Provided technical and consulting services during the operation of the landfarm, including biological health analyses sampling, data interpretation, report presentation and closure. Other Environmental Projects:
 - ❑ Numerous due diligence assessments and affected property assessments for various clients.
 - ❑ Non-producing “old oilfield” asset assessments (Chevron Environmental Management Company and Chevron Business and Real Estate Services).

- ❑ Several States, Monitoring and assessments of natural gas compressor stations (El Paso Energy Corporation-Tennessee Gas Pipeline and Southern Natural Gas).
- ❑ Texas – Hydrostatic water treatment projects.
- ❑ Texas – Wastewater permitting and discharge analyses (Williams Energy-Williams Gas Pipeline and EMPCo.).
- ❑ Numerous crude oil and refined product spill delineations.
- ❑ Texas City, Texas – BP-Amoco pipeline release assessment affecting sanitary sewer system.
- ❑ Texas – Assessments of Shell Oil Products US and related enterprises-Equiva, Motiva and Equilon.
- ❑ Pasadena, Texas – Kinder Morgan Texas Pipeline, Assessment to evaluate off-site source of corrosion to pipeline.
- ❑ Remediation and landfarms (Chevron Environmental Management Co., First Interstate (successor Wells Fargo Bank), Kinder Morgan, Genesis Crude Oil, L.P., Valero Logistics Operations, L.P., TEPPCO, Specialty Lubricants and Commercial Metals).
- ❑ Angleton, Texas – First Interstate (successor Wells Fargo Bank), specialty soil vapor extraction system.
- ❑ Rockport and Marshall, Texas-First Interstate (successor Wells Fargo Bank), vacuum heap/augmented with automated microbial/nutrient additive system.
- Administrative duties, supervision, cost proposals, report preparation, regulatory document preparation, client project status reports. Supervision and field experience in soil boring/monitor well drilling advancement, logging, decommissioning and soil sampling criteria. Installation of numerous soil borings and groundwater monitoring wells at various sites.
- Field experience in groundwater monitoring, low flow sampling, flow interpretation, and contaminant plume mapping. Experience in a variety of mapping, site plan creation/surveying, geographic information systems, regulatory databases and land-use planning.
- Performed over twenty-six hundred Phase I Site Assessments, Categorical Exclusions and Limited Environmental Assessments for various clients including oil companies (Chevron Environmental Management Co., ChevronTexaco Business and Real Estate Services, Shell Oil Products US, Weatherford International, Inc., EMPCo., etc.) banks, lending agencies, private individuals and/or businesses and corporations, engineering firms, Texas Department of Transportation, City of Houston Department of Public Works and Engineering and Harris County Public Infrastructure Department-Architecture and Engineering Division. Performed site assessments on all types of properties and facilities including vacant and developing properties, office buildings, office/warehouses, machine shops, and industrial properties. Performed PCS PrimeCo., Sprint, NEXTEL, and American Tower Company pad site assessments. Project Budgets \$2,500-\$5,500: Locations: Texas, Louisiana, North Carolina, Ohio, Virginia, West Virginia.
- Performed and managed various site clean-ups (hazardous and non-hazardous materials/items). Sampling events of abandoned drums and containers with unidentified substances, laboratory supervision, obtaining waste codes, arranging pick-up by certified waste hauling enterprises and appropriate final disposal activities.
