RE: Limited Phase II Environmental Site Assessment (ESA) Report
Memorial Drive Paving Project
Houston, Harris County, Texas
CSJ No. 0912-70-082

BOA Project No.: 7312H-P2

Dear Mr. Lacy:

EXECUTIVE SUMMARY

Berg♦Oliver Associates, Inc. is pleased to present our report summarizing the findings and conclusions of the Limited Phase II ESA conducted on the Memorial Drive Paving Project in Houston, Harris County, Texas. The following provides a brief summary of the Phase II ESA:

Field activities were conducted on July 2, 3, 8, 9 and 10, 2014 by BOA representative Sasha Ross. The scope of work proposed included up to twenty-nine (29) soil borings and up to nine groundwater samples, however two (2) previously planned soil borings (SB-1 & SB-17) were cancelled due to the presence of many underground structures. The depths that borings were completed to were contingent on the depth of proposed utility excavation along the two-mile stretch of Memorial Drive and vary along the project alignment. The City of Houston (COH) Chapter 11 requirements include an additional five feet in depth added to those utility excavation depths. In all, twenty-seven (27) soil borings were completed to varying depths of 14-25 feet below ground surface (bgs) at the sites of *Recognized Environmental Conditions* (RECs) identified in the previously completed Phase I ESA (Phase I ESA, BOA, PN 7312H-P1, November 2013). The REC sites include nine (9) Leaking Petroleum Storage Tank (LPST) facilities, one (1) Dry Cleaning (DRYC) facility, and three (3) historical known or potential fueling station facilities. The proposed boring locations are depicted in Figures 2 through 5. Soil and groundwater samples were obtained for laboratory analysis of chemicals of concern (COC) associated with fueling stations and/or dry-cleaning operations.

Soil Laboratory Analytical

Based on the sampling and laboratory analytical results, six (6) REC locations are considered to be Potentially Petroleum Contaminated Areas (PPCA) as defined by City of Houston (COH) Guide Specification 02105, Section 1.04-B (2005).

PID readings at all soil boring locations were insignificant with values ranging between 0-6.6 ppm. However, laboratory analysis reported detections of chemicals of concern (COC) for the following samples:

- 1) Groundwater Sample GW-2 (at soil boring location SB-2) (14002 Memorial Drive): Elevated MTBE value in groundwater.
PPCA Station **109+00** to Station **111+00**
- 2) Soil Sample SB-4 (14360 Memorial Drive): Elevated MTBE value at 21-22 ft bgs.
PPCA Station **76+50** to Station **77+50**
- 3) Soil Sample SB-10 (14557 Memorial Drive): Elevated TPH values at 16-17 ft. bgs and J-values for acetone, 1,2-Dichloroethane, and chloroform.
PPCA Station **59+00** to Station **61+00**
- 4) Soil Sample SB-11 (14557/14565 Memorial Drive): Elevated TPH values 16-17 ft. bgs.
PPCA Station **59+00** to Station **61+00**
- 5) Soil Sample SB-14 (14603 Memorial Drive): J-values for TPH at 23-24 ft. bgs.
PPCA Station **56+00** to Station **57+00**
- 6) Soil Sample SB-26 (14754 Memorial Drive): J-values for Benzene at 13-14 ft.t bgs.
PPCA Station **40+30** to Station **41+20**
- 7) Soil Sample SB-27 (14803 Memorial Drive): J-values for TPH at 17-18 ft. bgs.
PPCA Station **33+50** to Station **34+50**

Groundwater

Groundwater samples were proposed to be collected at nine (9) sample locations (SLs) along the project alignment. An attempt was made to obtain one groundwater sample in the nine (9) sample location (SL) groupings (see *Appendix D table*); however, ground water samples were not collected in every SL grouping due to depth of completion with no presence of groundwater or a groundwater sample already taken for that grouping. During the Phase II ESA, groundwater was collected at six (6) soil boring locations in depths between 17 to 25 ft. bgs, the remaining four (4) locations either did not exhibit groundwater in the soil boring or was in a SL already sampled. All groundwater samples were reported by the laboratory as non-detect with the exception of GW-2 (at soil boring location SB-2) which reported a MTBE concentration of 0.0036mg/kg. Although this resultant value is lower than the TCEQ Tier 1 Groundwater PCLs, the presence of the contaminant makes this location a PPCA. Additional details are presented in *Section 5.3*.

Recommendations

Based on the laboratory analytical results and field observations of the Limited Phase II Environmental Site Assessment for the Memorial Drive Paving Project in Houston, Harris County, Texas, the following is noted:

The laboratory analytical results indicate that the soil is not significantly hydrocarbon-affected and is not a concern to construction workers; however, these locations may impact design considerations in regards to PPCAs as described in the COH Guide Specifications 02105 and 02120.

No further investigation appears necessary at this time.

If you have any questions or comments, please contact me at 281-589-0898.

1.0 INTRODUCTION

Select subsurface utility replacement and road repaving are proposed for a two-mile portion of Memorial Drive. The limits of the project are from Eldridge Parkway to North Kirkwood Road. Location maps of the investigated areas of the project alignment (Key Map©® and United States Geological Survey Topographic Map), Figure 1A and 1B define the project area and are presented in the Figures attachments of this report. The project area will typically be referred to as the “project alignment” in this document.

2.0 SCOPE-OF-WORK

Berg♦Oliver Associates, Inc. (BOA) was retained by CivilTech Engineering, Inc. to evaluate whether the project alignment has been impacted by thirteen (13) previously reported RECs which include nine (9) leaking petroleum storage tank (LPST) facilities, three (3) potential ghost fueling stations, and one (1) historical dry cleaner facility listed on the Dry Cleaning Remediation Program (DCRP) along the project alignment. The scope of work is based on the ASTM guidelines for Phase II environmental Site Assessment ASTM E 1903-11 and the City of Houston Chapter 11 Geotechnical and Environmental guidelines. The facilities previously identified as RECs are as follows:

- 1) **14002 Memorial Drive-** Map ID# 1- Shell Retail/TPG 225 05/ Star Enterprises, LPST facility.
- 2) **14360 Memorial Drive-** Map ID# 25- Diamond Shamrock 527, LPST facility.
- 3) **14403 Memorial Drive-** Map ID# 13- Texaco Service Station/ Sammy’s Memorial Texaco, LPST facility.
- 4) **14565 Memorial Drive-** Map ID# 3- Former Conoco Station, LPST facility.
- 5) **14602 Memorial Drive-** Map ID# 19- Exxon Mobil 62899/ Westside Memorial 66, LPST facility.
- 6) **14603 Memorial Drive-** Map ID# 18- Mobil 12BLX/ 12BLX/ Mobil Oil 00BLX/ Mobil Oil Corporation, LPST facility.
- 7) **14732 Memorial Drive-** Map ID# 24- Mr. Pride Car Wash/ Bubbles Hand Car Wash, LPST facility.
- 8) **14754 Memorial Drive-** Map ID# 10- Texaco Station/ Texaco/ Memorial Citgo, LPST facility.
- 9) **14803 Memorial Drive-** Map ID# 20- Chevron 60107979/ Chevron, LPST facility.
- 10) **14557 Memorial Drive-** Map ID# 7- Love Dry Cleaners/ Your Valet Cleaners, is on the DCRP list.

11) 14702 Memorial Drive: Grochett's Texaco Service (1972)

The facility is considered a ghost facility as it was not reported in the regulatory database, and does not currently exist in this location but was reported in the 1972 city directories.

12) 14556 Memorial Drive: Conoco Car Wash (1972, 1980)

This facility appears to have an address discrepancy as it is listed twice in the regulatory database. The second listing is listed as 14565 Memorial Drive which is previously mentioned above and appears to be the correct address. *(Duplicate facility)*

13) 14477 Memorial Drive: Seven- Eleven (1972)

The facility is considered a ghost facility as it was not reported in the regulatory database, and does not currently exist in this location but was reported in 1972 city directories.

Sampling and analysis was conducted to determine whether contamination is present and the potential concentrations of the contaminant(s) in the soil and/or groundwater at the project alignment. The Phase II ESA consisted of the following:

- Conducted an investigation of facilities with the potential for environmental conditions as identified in a previously conducted Phase I ESA for the project alignment.
- Completed a Texas Excavation Safety (Texas 811) notification.
- Placing soil borings for soil sampling at equidistant locations to provide adequate coverage of the investigated facilities or area and to depths based on proposed construction activities. Submitted soil samples for laboratory analytical testing based upon field observations (visual and olfactory) and field screening.
- Conducted continuous field screening of soil cores at 2.0-foot intervals utilizing a photo-ionization detector (PID) calibrated to 100 ppm isobutylene standard.
- Completed twenty-seven (27) soil borings along the project alignment.
- Submitted soil samples for laboratory analyses of Volatile Organic Compounds (VOCs), Methyl Tert-Butyl Ether/Benzene, Toluene, Ethyl-benzene and total Xylenes (MTBE/BTEX) and/or Total Petroleum Hydrocarbons (TPH).
- Detailed site assessment activities, reviewed laboratory analytical results and presented the results and conclusions in a Limited Phase II ESA investigation report.

A thorough attempt has been made to identify soil and groundwater contamination at the proposed locations; however, there is a possibility that contamination may have escaped detection due to the limitations of this study, or the presence of undetected or unreported environmental releases. BOA reserves the right to alter our conclusions and recommendations based on our review of any information obtained after the date of this report. Our professional services have been performed

using the degree of care and skill ordinarily exercised, under similar conditions by environmental consultants practicing in this or similar localities. No warranty, express or implied is made as to the professional information included in this report.

3.0 PHASE II ESA ACTIVITIES

On July 2, 3, 8, 9, and 10, 2014, BOA completed twenty-seven (27) of the twenty-nine (29) proposed soil borings. Samples SB-1 through SB-29 were collected at thirteen (13) REC locations (one (1) duplicate facility) to determine if TCEQ reported leaks have affected the project alignment. Soil borings SB-1 and SB-17 were not completed due to the presence of multiple underground structures. The depths that borings were completed to were contingent on the depth of proposed utility excavation along the two-mile stretch of Memorial Drive and vary along the project alignment. The City of Houston (COH) Chapter 11 requirements include an additional five feet in depth added to those utility excavation depths. The location and depth of the borings were based on proposed construction activities and requirements as described in the City of Houston Chapter 11 Design Manual. Following the COH requirements, soil borings along the project alignment were completed to depths varying between 14-25 feet bgs. Design plans include excavations on both the north and the south side of Memorial Drive.

Cores were pre-cut from the project alignment before drilling could commence due to the thickness of the roadway which was found to be up to 14" in depth including the stabilizing shell or sand layer. Soil borings were advanced utilizing direct push technologies inclusive of a truck-mounted hydraulically-driven sampling device consisting of a 2-inch diameter, 4-foot long stainless steel sampling spoon. Soil samples were continuously collected at 2-foot intervals and field screened utilizing a photo-ionization detector (PID). PID readings ranged between 0-6.6 ppm at the REC locations. Geologic stratigraphy (lithology) and subsurface characteristics were recorded by the field geologist. Soil Boring Locations and Data Summary in Appendix D provide site details. Soil boring locations are presented in Figures 6-10. Soil boring logs are presented in Appendix A.

Prior to the initial soil boring and between each 4-foot advancement, all sampling devices were thoroughly cleaned and decontaminated using a hospital grade detergent, water and distilled water. Soil samples were obtained by personnel utilizing appropriate sampling tools and wearing clean, disposable gloves. Disposable nitrile gloves were changed between each sample collection. As instructed by the COH Chapter 11 Design Manual, samples were to be obtained by the zone exhibiting the highest PID/OVA reading. If the highest PID/OVA readings are non-detect, the sample shall be collected from the soil-groundwater interface. If no saturated zone exists, then the sample shall be collected from the bottom of the boring. PID readings included samples of the soil boring collected from each 2-foot interval and placed in a disposable bag for head space screening. Soil samples were then collected based on the previously mentioned requirements, and placed into two separate 4-ounce sterile glass containers equipped with Teflon-lined lids and submitted to the laboratory for testing. Each container was filled to capacity with soil to limit the amount of headspace present. All samples were labeled in

the field and stored at approximately 4°C prior to submission to Accutest Laboratories in Houston, Texas for laboratory analyses. Chain-of-custody documentation accompanied the samples in accordance with standard quality assurance and quality control measures. Boreholes were plugged with bentonite plugging material and surface patched using appropriate material such as asphalt or no shrink concrete if the boring was taken within the road surface in accordance with standard drilling practice.

3.1 SOIL SAMPLING

Engineering plans show that excavation is proposed on the northern and southern side of the road in most locations; therefore, some soil borings were taken on both sides of Memorial Drive from the designated REC facility. Soils were classified using the Unified Soil Classification System (USCS). The subsurface soils in general, appeared to consist of clayey silt, silty clay, and clay. Specific soil descriptions and field observations for the soil borings are included on the boring logs contained in Appendix A. Soil classifications presented on the boring logs are based on visual field classification and have not been verified by geotechnical laboratory tests. Actual soil conditions may differ from those presented in the boring logs. PID values for all soil borings ranged between 0.0-6.6 ppm, which is an insignificant value and may have been attributed to vehicle exhaust of the drill rig and passing vehicles; therefore, samples were taken at the soil-groundwater interface near the bottom of the boring as described by COH's Chapter 11, Geotechnical and Environmental requirements.

Photographs of field activities are presented in Appendix C, Soil Boring Location Maps are presented in Figures 3-7, and a Soil Boring Locations and Data Summary table is presented in Appendix D.

1) **14002 Memorial Drive-** Map ID# 1- Shell Retail/TPG 225 05/Star Enterprises

- Soil boring SB-1 was proposed to be drilled on Kirkwood Road, adjoining the eastern boundary of this facility. Underground structures prevented the boring from being completed at this location.
- Soil borings SB-2 and SB-3 were completed to 23.0 ft. bgs on the southern boundary of this facility. PID readings ranged between 0.1-3.1 ppm at these locations. Groundwater was encountered between 17.5-20.0 ft. bgs on sample SB-2, and at 15.0 ft. bgs on sample SB-3. Soil samples were taken at this soil-groundwater interface.
- Groundwater sample GW-2 was taken at boring location SB-2. See Section 3.1 and 5.3 for additional details.

2) **14360 Memorial Drive-** Map ID# 25- Diamond Shamrock 527, currently Valero fueling station

- Soil borings SB-4 and SB-5 were completed to 22.0 ft. bgs on the

northern boundary of this facility. PID readings were non-detect (0.0 ppm) at these locations. Groundwater was not encountered to 23.0 ft. bgs. Soil samples were taken at the bottom of the boring.

- A third boring, SB-6 overlaps with Sammy's Memorial Texaco south of this facility at 14403 Memorial Drive.

3) **14403 Memorial Drive-** Map ID# 13- Texaco Service Station/ Sammy's Memorial Texaco

- Soil boring SB-6 was proposed to be completed to 22.0 ft. bgs, but met refusal at 20.5 ft. bgs south of the facility across Memorial Drive. PID readings ranged between 0.4-0.9 ppm at this location. Groundwater was not encountered to 20.5 ft. bgs. Soil samples were taken near the bottom of the boring at 19.5-20.5 ft. bgs.
- Two borings, SB-4 and SB-5 overlap with the Valero fueling station north of this facility at 14360 Memorial Drive.

4) **14477 Memorial Drive-** Seven- Eleven (1972), currently a business plaza.

- Soil borings SB-7 and SB-8 were completed to 18.0 ft. bgs on the northern boundary of this facility. PID readings were non-detect (0.0 ppm) at these locations. Groundwater was encountered between 12.0-13.0 ft. bgs on sample SB-7 and a soil sample was taken at this soil-groundwater interface. Groundwater was not encountered on sample SB-8 to 18 ft. bgs; therefore the sample was taken at the bottom of the boring.
- Soil boring SB-9 was completed to 18.0 ft. bgs across Memorial Drive from the northern boundary of this facility. PID readings were non-detect (0.0 ppm) at this location. Groundwater was not encountered to 18 ft. bgs; therefore the sample was taken at the bottom of the boring.
- Groundwater sample GW-6 was taken at boring location SB-7. See Section 3.1 and 5.3 for additional details.

5) **14557 Memorial Drive-** Map ID# 7- Love Dry Cleaners/ Your Valet Cleaners

- Soil borings SB-10 and SB-11 were completed to 17.0 ft. bgs on the northern boundary of this facility. PID readings ranged between 0.0-1.1 ppm at these locations. Groundwater was encountered between 9.0-17.0 ft. bgs on sample SB-10 and a soil sample was taken at the soil-groundwater interface at 9.0-10.0 ft. bgs. Groundwater was not encountered on sample SB-11 to 17.0 ft. bgs; therefore the sample was taken at the bottom of the boring.
- One boring, SB-12 overlaps with the former Conoco fueling station west of this facility at 14565 Memorial Drive.

- Groundwater sample GW-5 was taken at boring location SB-10. See Section 3.1 and 5.3 for additional details.
- 6) **14565 Memorial Drive**- Map ID# 3- Former Conoco Station (Recently closed and demolished facility)
- Soil borings SB-12 and SB-13 were completed to 17.0 ft. bgs on the northern boundary of this facility. PID readings ranged between 0.5-1.0 ppm at these locations. Groundwater was not encountered to 17.0 ft. bgs; therefore the samples were taken near the bottom of the borings.
 - One boring, SB-11 overlaps with the former Love/Your Valet dry cleaning east of this facility at 14557 Memorial Drive.
 - 14556 Memorial Drive- Conoco Car Wash (1972, 1980)
This facility is assumed to have an address discrepancy as it is listed twice in the regulatory database with an address of 14565 Memorial Drive and appears to be the same facility.
- 7) **14602 Memorial Drive**- Map ID# 19- Exxon Mobil 62899/ Westside Memorial 66 (Currently, Phillips 66 fueling station)
- Soil boring SB-15 was completed to 25.0 ft. bgs on the southern boundary of this facility. PID readings ranged between 1.4-6.6 ppm at this location. Groundwater was encountered between 22.0-23.0 ft. bgs and a soil sample was taken at this soil-groundwater interface.
 - Soil borings SB-14 and SB-16 overlaps with the former Mobil fueling station previously located at 14603 Memorial Drive, south of this facility.
 - Groundwater sample GW-1 was taken at boring location SB-15. See Section 3.1 and 5.3 for additional details.
- 8) **14603 Memorial Drive**- Map ID# 18- Mobil 12BLX/ 12BLX/ Mobil Oil 00BLX/ Mobil Oil Corporation (Currently, Taco Bell and Starbucks)
- Soil borings SB-14 and SB-16 were completed to 25.0 ft. bgs on the northern boundary of this facility. PID readings ranged between 0.3-2.8 ppm at this location. Groundwater was encountered between 23.0-24.0 ft. bgs on boring SB-14 and a soil sample was taken at this soil-groundwater interface. Groundwater was not encountered to 25.0 ft. bgs on boring SB-16; therefore the sample was taken near the bottom of the boring.
 - Soil boring SB-15 overlaps with the former Mobil fueling station previously located at 14603 Memorial Drive, south of this facility.
 - Soil boring SB-17 was proposed to be drilled on the northern boundary of the Starbucks coffee facility, adjoining the western

boundary of Taco Bell. Underground and overhead structures prevented the boring from being completed at this location as options on boring re-location were limited.

- 9) **14702 Memorial Drive-** Grochett's Texaco Service (1972) (Ghost facility, possibly in the current Walgreens location in a shopping plaza)

This facility appears to have been a fueling station reported in the City Directories possibly located at/or adjoining east of Hungry's Restaurant based on surrounding address locations, but exact location is unknown. This facility was not reported in the regulatory database, and does not currently exist in this location. Secondary possible location is at 14754 Memorial at the former Citgo location, borings SB-24 through SB-26, which is also being tested.

- Soil borings SB-18 and SB-19 were completed to 23.0 ft. bgs on the southern boundary of this facility. PID readings ranged between 0.1-1.0 ppm at this location. Groundwater was not encountered to 23.0 feet bgs on boring SB-18; therefore the sample was taken near the bottom of the boring. Groundwater was encountered between 18.0-19.0 ft. bgs on boring SB-19 and a soil sample was taken at this soil-groundwater interface.
- Soil boring SB-20 was completed south across Memorial Drive from this facility. PID readings ranged between 0.3-1.2 ppm at this location. Groundwater was not encountered to 23.0 ft. bgs, and a soil sample was taken near the bottom of the boring.
- Groundwater sample GW-3 was taken at boring location SB-19. See Section 3.1 and 5.3 for additional details.

- 10) **14732 Memorial Drive-** Map ID# 24- Mr. Pride Car Wash/ Bubbles Hand Car Wash

- Soil borings SB-21 and SB-23 were completed to 23.0 ft. bgs on the southern boundary of this facility. PID readings ranged between 0.3-1.1 ppm at these locations. Groundwater was not encountered to 23.0 ft. bgs, and soil samples were taken near the bottom of the borings.
- Soil boring SB-22 was completed south across Memorial Drive from this facility. PID readings were 0.1 ppm at all boring depths at this location. Groundwater was encountered between 16.0-24.0 ft. bgs, and a soil sample was taken at this soil-groundwater interface.
- Groundwater sample GW-4 was taken at boring location SB-22. See Section 3.1 and 5.3 for additional details.

- 11) **14754 Memorial Drive-** Map ID# 10- Texaco Station/ Texaco/ Memorial Citgo (recently demolished)

- Soil boring SB-24 was completed to 14.0 ft. bgs east of this facility across Thickett Lane. PID readings were non-detect (0.0 ppm) at this location. Groundwater was not encountered to 14.0 ft. bgs, and the soil sample was taken near the bottom of the boring.
- Soil borings SB-25 and SB-26 were completed to 14.0 ft. bgs south across Memorial Drive from this facility. PID readings ranged between 0.0-0.3 ppm at these locations. Groundwater was not encountered to 14.0 ft. bgs, and the soil sample was taken near the bottom of the boring.

12) **14803 Memorial Drive**- Map ID# 20- Chevron 60107979/ Chevron (Currently, Carmello's Italian restaurant mobile office building and employee parking)

- Soil borings SB-27, SB-28, and SB-29 were completed to 20.0 ft. bgs on the northern boundary of this facility. PID readings ranged between 0.1-1.7 ppm at these locations. Groundwater was not encountered to 20.0 ft. bgs and the soil samples were taken near the bottom of the borings.

3.1 GROUNDWATER SAMPLING

Due to the multiple locations of the REC facilities and their close proximity to each other, nine (9) groundwater sample locations (SLs) were designated to cover multiple facilities. Of the nine (9) SLs, six (6) SLs were sampled. The remaining four (4) locations did not exhibit groundwater in the soil boring or was in a SL already sampled. Groundwater sampling was conducted at soil borings exhibiting a soil-groundwater interface to determine the presence or absence of Chemicals of Concern (COC) in groundwater at the investigated REC sites. Temporary piezometer wells were installed in selected borings as follows: GW-1 (SB-15), GW-2 (SB-2), GW-3 (SB-19), GW-4 (SB-22), GW-5 (SB-10), and GW-6 (SB-7). A low-flow pump with adjustable flow-rate was utilized to collect samples and purge sediment before collections. Three (3) Forty (40) milliliter (mL) vials of groundwater, preserved with hydrochloric acid (HCL), were collected for each COC as related to each REC site such as benzene, toluene, ethyl-benzene and total xylenes (BTEX), methyl tert-butyl ether (MTBE), volatile organic compounds (VOCs), and/or total petroleum hydrocarbons (TPH). The samples were stored on ice until submitted to laboratory.

See Soil Boring Locations and Data Summary Table in Appendix D for additional details.

4.0 REGULATORY FRAMEWORK

The Texas Commission on Environmental Quality (TCEQ) administers the Environmental Protection Agency (EPA) regulations and enforcement in Texas. It has additionally established its own standards for environmental compliance. The Texas Risk

Reduction Program (TRRP) administered by TCEQ, as provided for in 30 TAC Chapter 350, addresses levels of regulated compounds and allowable levels of such contaminants to protect human health, safety, and the environment. The TCEQ TRRP applies to closures, corrective actions, and remediation efforts subject to the jurisdiction of the TCEQ. The TRRP, whether residential or commercial, contains provisions for Remedy Standard A (no physical controls required) or Remedy Standard B (physical controls required). Implementation of Remedy Standard A or Remedy Standard B is a tiered process, as described in general terms below:

- Tier 1 is a risk-based analysis to derive non site-specific protective concentration limits (PCLs) for complete or reasonably anticipated to be complete exposure pathways. Tier 1 is based on default exposure factors and affected property parameters, and assumes exposure occurs at, above, or below the source area (i.e., no lateral transport) (TCEQ Subchapter D Section 350.75 (b)).
- Tier 2 is a risk-based analysis to derive site-specific PCLs for complete or reasonably anticipated to be completed exposure pathways utilizing site-specific exposure factors, as allowable, and/or affected property parameters and Tier 1 equations. Tier 2 PCLs may also include lateral transport considerations (TCEQ, Subchapter D Section 350.75 (c)).
- Tier 3 is a risk-based analysis to derive site-specific PCLs for complete or reasonably anticipated to be completed exposure pathways. Tier 3 PCLs are based on measured natural attenuation factors and/or natural attenuation factor models/equations other than those provided for Tier 1 or 2; and may also include site-specific exposure factors, as allowable, and/or affected property parameters (TCEQ, Subchapter D Section 350.75 (d)).

The below provided soil PCLs are concentrations which are protective of human health and the environment:

- | | |
|-------------------------|---|
| * $^{GW}Soil_{Ing}$ * | Groundwater Soil Ingestion ($^{GW}Soil_{Ing}$) is the groundwater protection standard for either residential or commercial use. Concentration in soil is assumed protective of groundwater considering cross-medial contamination of groundwater from contaminated soil. This is the critical PCL for special handling practices of the soil for the project. |
| * $^{Tot}Soil_{Comb}$ * | The Total Soil Combined ($^{Tot}Soil_{Comb}$) PCLs are a combined exposure standard for residential use. The PCL considers cross-media contamination of human ingestion, inhalation and dermal pathways. This is the critical PCL for construction worker exposure concentrations. |

* $^{GW}GW_{Ing}$ * The groundwater ingestion pathway ($^{GW}GW_{Ing}$) PCL is the groundwater protection standard for either residential or commercial use. The $^{GW}GW_{Ing}$ PCLs are the same as the Federal Drinking Water Standards Maximum Concentration Limits (MCLs). This will be utilized to determine whether the groundwater is acceptable for surface discharge.

Values that do not meet or exceed the TCEQ TRRP PCLs are not a concern to construction workers; however soil borings with detections (including J-values) are defined as Potentially Petroleum Contaminated Areas (PPCA) as defined in the City of Houston (COH) Guide Specification document 02105 and will require action levels as described in the COH Guide Specification documents 02105 and 02120.

5.0 SOIL LABORATORY ANALYTICAL

A total of twenty-seven (27) soil samples were collected from the twenty-seven (27) soil borings and were submitted to a certified laboratory for analyses. The soil samples were analyzed for total petroleum hydrocarbons (TPH) by Texas Commission on Environmental Quality (TCEQ) Texas Method 1005, volatile organic compounds (VOCs) and/or methyl tert-butyl ether/benzene, toluene, ethyl-benzene and total xylenes (MTBE/BTEX) by EPA Method SW846-8260. The following details the laboratory methodology:

5.1 LABORATORY ANALYTICAL METHODS

Methyl tert-butyl ether/benzene, toluene, ethyl-benzene, and xylene (MTBE/BTEX) and/or VOCs by SW-846 EPA Method 8260: This laboratory analysis employs a gas chromatograph (GC) equipped with a Mass Spectrometer (MS) detector to detect and quantify certain regulated, volatile organic compounds in a soil or water sample. Compounds on this list include certain chlorinated solvents used in dry cleaning and printing processes, refined petroleum products such as gasoline and diesel, and others. This method can also be used to test for BTEX compounds, which are a portion of the entire VOC list. These compounds are common components of most formulated gasolines, and their presence is a reliable indicator that a gasoline release has occurred.

Total petroleum hydrocarbons (TPH) by TCEQ Method 1005: This laboratory analysis utilizes a GC equipped with a flame ionization detector (FID) to quantify levels of petroleum compounds or derivatives in the range from C6 to C28, in a soil or groundwater medium. Results are reported in two to three distinct ranges, from C6 to C12, >C12 to C28 and >C28 to C35. This allows some interpretation as to the possible source of the release, based upon the indicated carbon range. Petroleum hydrocarbons are not necessarily hazardous or toxic. The analysis is designed to determine if TPH is present, and to quantify the level of petroleum hydrocarbons. This analysis is especially useful as a broad category

procedure, and may indicate additional testing for the specific hazardous or toxic constituents which may be present and contribute to the TPH levels assessed. Some constituents of petroleum hydrocarbons may be hazardous or toxic, high levels of TPH require additional testing of the sample area.

5.2 SOIL LABORATORY ANALYTICAL RESULTS

Soil samples SB-1 through SB-29, were submitted for analysis of TPH and MTBE/BTEX for LPST facilities with the exception of samples SB-10 and SB-11 which were additionally tested for TPH and VOCs for dry cleaning facilities and samples SB-1 and SB-17 which were cancelled due to various structures underground. The resulting laboratory analytical data was compared to the TCEQ TRRP Tier 1 Protective Concentration Limits (PCLs). Due to the limited number of soil sample collected along the project alignment, the PPCA station ranges are approximate. Lab Analysis reports are presented in Appendix B.

All soil samples are reported to be below TCEQ TRRP Tier 1 PCLs and are reported as non-detect (U) with the exception of:

1) Sample SB-4 (14360 Memorial Drive):

- An elevated MTBE value of 0.0075 mg/kg is reported for the sample taken at 21-22 ft bgs. This reported level is below the TCEQ action level with a groundwater value of 0.24 mg/L.
- The approximate station range is from 76+30 to 77+40.

2) SB-10 (14557 Memorial Drive):

- Elevated TPH values are reported for the sample taken at 16-17 ft. bgs with values of $C_{12}-C_{28}= 54.7$ mg/kg, $C_{28}-C_{35}=92.3$ mg/kg, for a total $C_6-C_{35}= 147$ mg/kg. J-values are reported for acetone at 0.0266 mg/kg J, 1,2-Dichloroethane at 0.0014 mg/kg J, and chloroform at 0.00923 mg/kg J.
- Acetone is an analyte that is typically laboratory introduced (related to sample preparation-solvents used to extract the analyzed substrate); therefore the detection is not a recognized environmental condition to the project and additional discussion is not warranted. A “J” value is an estimated concentration between the method detection limit (MDL) and practical quantitation limit (PQL).
- The approximate station range is from 60+00 to 61+00.

3) SB-11 (14557/14565 Memorial Drive):

- Elevated TPH values are reported for the sample taken at 16-17 ft. bgs with values of $C_{28}-C_{35}=30.8$ mg/kg, for a total $C_6-C_{35}= 30.8$ mg/kg.

- The approximate station range is from 59+00 to 60+00.
- 4) SB-14 (14602 Memorial Drive):
- J-values for TPH are reported for the sample taken at 23-24 ft. bgs with values of $C_{12}-C_{28}= 18.1$ mg/kg J, for a total $C_6-C_{35}= 18.1$ mg/kg J.
 - A “J” value is an estimated concentration between the method detection limit (MDL) and practical quantitation limit (PQL).
 - The approximate station range is from 56+20 to 57+30.
- 5) SB-26 (14754 Memorial Drive):
- J-values for benzene are reported for the sample taken at 13-14 ft. bgs with a value of 0.0012 mg/kg J.
 - A “J” value is an estimated concentration between the method detection limit (MDL) and practical quantitation limit (PQL).
 - The approximate station range is from 40+30 to 41+20.
- 6) SB-27 (14803 Memorial Drive):
- J-values for TPH are reported for the sample taken at 17-18 ft. bgs with values of $C_{12}-C_{28}= 16.0$ mg/kg J, $C_{28}-C_{35}=69.7$ mg/kg J, for a total $C_6-C_{35}= 85.7$ mg/kg J.
 - A “J” value is an estimated concentration between the method detection limit (MDL) and practical quantitation limit (PQL).
 - The approximate station range is from 33+50 to 34+50.

5.3 GROUNDWATER LABORATORY ANALYTICAL RESULTS

Groundwater samples GW-1 through GW-6, were submitted for analysis of TPH and MTBE/BTEX for LPST facilities, with the exception of sample GW-5 which was also tested for TPH and VOCs for dry cleaning facilities. The resulting laboratory analytical data was compared to the TCEQ TRRP Tier 1 Groundwater PCLs.

All groundwater samples are reported to be below TCEQ TRRP Tier 1 PCLs and are reported as non-detect (U) with the exception of:

- 1) GW-2 (Soil Boring SB-2 14002 Memorial Drive):
- Reported MTBE concentration of 0.0036mg/kg. Although this resultant value is lower than the Groundwater PCL of $^{GW}GW_{Ing}$ 0.24 mg/kg, the presence of the contaminant makes this location a PPCA based on COH requirements.
 - The approximate station range is from 109+00 to 111+00.

Lab Analysis Results are presented in Appendix B.

6.0 AIR MONITORING/WASTE MANAGEMENT PRACTICES

Based on the results of the Phase II ESA, the soil is not significantly hydrocarbon-affected and is not a concern to construction workers; however, the results in these locations may impact design considerations and it is recommended that the City of Houston (COH) Guide Specifications 02105 and 02120 are followed in regards to PPCA.

7.0 INVESTIGATION DERIVED WASTE

Two (2) composite soil samples of investigative derived waste (IDW) were collected from the contents of the 55-gallon drum of soil cores generated from the sampling activities. The composite soil sample was analyzed for MTBE/BTEX, VOC, and TPH. Based on the laboratory analytical results, sample IDW-1 reported a J-value of benzene at 0.00092 mg/kg J. This value is far below the TCEQ TRRP Tier 1 PCLs of 0.026 mg/kg; therefore the soil will be disposed of as general waste. A copy of the Lab Analysis Results is presented in APPENDIX B.

8.0 CONCLUSIONS

The purpose of the assessment was to determine the absence or presence and the concentration levels of contaminants associated with petroleum hydrocarbons and/or dry cleaning practices in soil and/or groundwater. We conclude that COCs do not meet or exceed the TCEQ TRRP PCLs for MTBE/BTEX, TPH, or VOCs in any soil or groundwater sample; however there are six (6) PPCAs that may impact construction design and activities.

9.0 RECOMMENDATIONS

Based on the laboratory analytical results and field observations of the Limited Phase II Environmental Site Assessment for the two-mile Memorial Drive paving project in Houston, Harris County, Texas, the soil is not significantly hydrocarbon-affected and is not a concern to construction workers; however, the results in these locations may impact design considerations and it is recommended that the City of Houston (COH) Guide Specifications 02105 and 02120 are followed in regards to PPCA.

The PPCAs and corresponding centerline stations are as follows:

- 1) Groundwater Sample GW-2 (at soil boring location SB-2) (14002 Memorial Drive): Elevated MTBE value in groundwater.
PPCA Station **109+00** to Station **111+00**
- 2) Soil Sample SB-4 (14360 Memorial Drive): Elevated MTBE value at 21-22 ft bgs.
PPCA Station **76+50** to Station **77+50**
- 3) Soil Sample SB-10 (14557 Memorial Drive): Elevated TPH values at 16-17 ft. bgs and J-values for acetone, 1,2-Dichloroethane, and chloroform.
PPCA Station **59+00** to Station **61+00**
- 4) Soil Sample SB-11 (14557 Memorial Drive): Elevated TPH values 16-17 ft. bgs.
PPCA Station **59+00** to Station **61+00**
- 5) Soil Sample SB-14 (14603 Memorial Drive): J-values for TPH at 23-24 ft. bgs.
PPCA Station **56+00** to Station **57+00**
- 6) Soil Sample SB-26 (14754 Memorial Drive): J-values for Benzene at 13-14 ft. bgs. PPCA Station **40+30** to Station **41+20**
- 7) Soil Sample SB-27 (14803 Memorial Drive): J-values for TPH at 17-18 ft. bgs.
PPCA Station **33+50** to Station **34+50**

No further studies are recommended for the project alignment.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Berg Oliver Associates

Job No TC50925

Site: Memorial Drive, Houston, TX/7312-H-P2

Report Date 7/10/2014 4:22:01 PM

5 Samples were collected on 07/02/2014 and received intact at Accutest on 07/03/2014 and properly preserved in 1 cooler at 4 Deg C. These Samples received an Accutest job number of TC50925. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260C

Matrix AQ	Batch ID: VE1519
------------------	-------------------------

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) TC51210-2MS, TC51210-2MSD were used as the QC samples indicated.

Matrix SO	Batch ID: VR775
------------------	------------------------

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) TC50948-IMS, TC50948-1MSD were used as the QC samples indicated.

Extractables by GC By Method TNRCC 1005

Matrix AQ	Batch ID: OP33119
------------------	--------------------------

- All samples were extracted within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) TC50998-17MS, TC50998-17MSD were used as the QC samples indicated.

Matrix SO	Batch ID: OP33113
------------------	--------------------------

- All samples were extracted within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) TC50925-IMS, TC50925-1MSD were used as the QC samples indicated.

Wet Chemistry By Method SM 2540 G

Matrix SO	Batch ID: GN59559
------------------	--------------------------

- Sample(s) TC50874-IDUP were used as the QC samples for Solids, Percent.

Accutest Laboratories Gulf Coast (ALGC) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALGC and as stated on the COC. ALGC certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALGC Quality Manual except as noted above. This report is to be used in its entirety. ALGC is not responsible for any assumptions of data quality if partial data packages are used

Summary of Hits

Appendix A Laboratory Data Package Cover Page

TC50925 This data package consists of

- This signature page, the laboratory review checklist, and the following reportable data:
- R1 Field chain-of-custody documentation;
- R2 Sample identification cross-reference;
- R3 Test reports (analytical data sheets) for each environmental sample that includes:
 - a) Items consistent with NELAC 5.13 or ISO/IEC 17025 Section 5.10
 - b) dilution factors,
 - c) preparation methods,
 - d) cleanup methods, and
 - e) if required for the project, tentatively identified compounds (TICs).
- R4 Surrogate recovery data including:
 - a) Calculated recovery (%R), and
 - b) The laboratory's surrogate QC limits.
- R5 Test reports/summary forms for blank samples;
- R6 Test reports/summary forms for laboratory control samples (LCSs) including:
 - a) LCS spiking amounts,
 - b) Calculated %R for each analyte, and
 - c) The laboratory's LCS QC limits.
- R7 Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including:
 - a) Samples associated with the MS/MSD clearly identified,
 - b) MS/MSD spiking amounts,
 - c) Concentration of each MS/MSD analyte measured in the parent and
 - d) Calculated %Rs and relative percent differences (RPDs), and
 - e) The laboratory's MS/MSD QC limits
- R8 Laboratory analytical duplicate (if applicable) recovery and precision:
 - a) The amount of analyte measured in the duplicate,
 - b) The calculated RPD, and
 - c) The laboratory's QC limits for analytical duplicates.
- R9 List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each
- R10 Other problems or anomalies.

The Exception Report for each "No" or "Not Reviewed (NR)" item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted in the Exception Report. This data package has been reviewed by the laboratory and is complete and technically compliant with the requirements of the methods used, except where noted by the laboratory in the attached exception reports. By my signature below, I affirm to the best of my knowledge, all problems/anomalies, observed by the laboratory as having the potential to affect the quality of the data, have been identified by the laboratory in the Laboratory Review Checklist, and no information or data have been knowingly withheld.

Check, if applicable: This laboratory meets an exception under 30 TAC&25.6 and was last inspection by

[] TCEQ or [] _____ on April 2011. Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

LABORATORY REVIEW CHECKLIST: REPORTABLE DATA						
Laboratory Name:		Accutest Gulf Coast	LRC Date:		7/10/2014	
Project Name:		Memorial Drive, Houston, TX/7312-H-P2	Laboratory Project Number:		TC50925	
Reviewer Name:		Anita Patel	Prep Batch Number(s):		GN59559, OP33113, OP33119, VE1519, VR775	
# ¹	A ²	DESCRIPTION	YES	NO	NA ³	NR ⁴ ER # ⁵
R1	OI	CHAIN-OF-CUSTODY (C-O-C):				
		Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X			
		Were all departures from standard conditions described in an exception report?	X			
R2	OI	Sample and quality control (QC) identification				
		Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X			
		Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X			
R3	OI	Test reports				
		Were samples prepared and analyzed within holding times?	X			
		Other than those results <MQL, were all other raw values bracketed by calibration standards?	X			
		Were calculations checked by a peer or supervisor?	X			
		Were all analyte identifications checked by a peer or supervisor?	X			
		Were sample detection limits reported for all analytes not detected?	X			
		Were all results for soil and sediment samples reported on a dry weight basis?	X			
		Were % moisture (or solids) reported for all soil and sediment samples?	X			
		Were bulk soils/solids samples for volatile analysis extracted with methanol per SW846 Method 5035?	X			
		If required for the project, are TIC's reported?			X	
R4	O	Surrogate recovery data				
		Were surrogates added prior to extraction?	X			
		Were surrogate percent recoveries in all samples within the laboratory QC limits?	X			
R5	OI	Test reports/summary forms for blank samples				
		Were appropriate type(s) of blanks analyzed?	X			
		Were blanks analyzed at the appropriate frequency?	X			
		Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X			
		Were blank concentrations <MQL?	X			
R6	OI	Laboratory control samples (LCS):				
		Were all COCs included in the LCS?	X			
		Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X			
		Were LCSs analyzed at required frequency?	X			
		Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	X			
		Does the detectability check sample data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X			
		Was the LCSD RPD within QC limits?	X			
R7	OI	Matrix spike (MS) and matrix spike duplicate (MSD) data				
		Were the project/method specified analytes included in the MS and MSD?	X			
		Were MS/MSD analyzed at the appropriate frequency?	X			
		Were MS (and MSD, if applicable) %Rs within the laboratory QC Limits?	X			
		Were the MS/MSD RPDs within laboratory QC limits?	X			
R8	OI	Analytical duplicate data				
		Were appropriate analytical duplicates analyzed for each matrix?	X			
		Were analytical duplicates analyzed at the appropriate frequency?	X			
		Were RPDs or relative standard deviations within the laboratory QC limits?	X			
R9	OI	Method quantitation limits (MQLs):				
		Are the MQLs for each method analyte included in the laboratory data package?	X			
		Do the MQLs correspond to the concentration of the lowest non-zero calibration	X			
		Are unadjusted MQLs and DCSs included in the laboratory data package?		X		2
R10	OI	Other problems/anomalies				
		Are all known problems/anomalies/special conditions noted in this LRC and ER?	X			
		Was applicable and available technology used to lower the SDL to minimize the	X			
		Is the laboratory NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices, and methods associated with this laboratory data package?	X			3

# ¹	A ²	DESCRIPTION	YES	NO	NA ³	NR ⁴ ER # ⁵
S1	OI	Initial calibration (ICAL)				
		Were response factors and/or relative response factors for each analyte within QC limits?	X			
		Were percent RSDs or correlation coefficient criteria met?	X			
		Was the number of standards recommended in the method used for all analytes?	X			
		Were all points generated between the lowest and highest standard used to calculate the curve?	X			
		Are ICAL data available for all instruments used?	X			
		Has the initial calibration curve been verified using an appropriate second source standard?	X			
S2	OI	Initial and continuing calibration verification (ICCV AND CCV) and continuing				
		Was the CCV analyzed at the method-required frequency?	X			
		Were percent differences for each analyte within the method-required QC limits?	X			
		Was the ICAL curve verified for each analyte?	X			
		Was the absolute value of the analyte concentration in the inorganic CCB < MDL?			X	
S3	O	Mass spectral tuning				
		Was the appropriate compound for the method used for tuning?	X			
		Were ion abundance data within the method-required QC limits?	X			
S4	O	Internal standards (IS)				
		Were IS area counts and retention times within the method-required QC limits?	X			
S5	OI	Raw data (NELAC Section 5.5.10)				
		Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X			
		Were data associated with manual integrations flagged on the raw data?	X			
S6	O	Dual column confirmation				
		Did dual column confirmation results meet the method-required QC?			X	
S7	O	Tentatively Identified Compounds (TICs):				
		If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X	
S8	I	Interference Check Sample (ICS) results				
		Were percent recoveries within method QC limits?			X	
S9	I	Serial dilutions, post digestion spikes, and method of standard additions				
		Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X	
S10	OI	Method detection limit (MDL) studies				
		Was a MDL study performed for each reported analyte?	X			
		Is the MDL either adjusted or supported by the analysis of DCSs?	X			
S11	OI	Proficiency test reports				
		Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X			
S12	OI	Standards documentation				
		Are all standards used in the analyses NIST-traceable or obtained from other appropriate source?	X			
S13	OI	Compound/analyte identification procedures				
		Are the procedures for compound/analyte identification documented?	X			
S14	OI	Demonstration of analyst competency (DOC)				
		Was DOC conducted consistent with NELAC Chapter 5?	X			
		Is documentation of the analyst's competency up-to-date and on file?	X			
S15	OI	Verification/validation documentation for methods (NELAC Chapter 5)				
		Are all the methods used to generate the data documented, verified, and validated, where applicable?	X			
S16	OI	Laboratory standard operating procedures (SOPs)				
		Are laboratory SOPs current and on file for each method performed?	X

LABORATORY REVIEW CHECKLIST (continued): Exception Reports			
Laboratory Name:	Accutest Gulf Coast	LRC Date:	7/10/2014
Project Name:	Memorial Drive, Houston, TX/731	Laboratory Project Number:	TC50925
Reviewer Name:	Anita Patel	Prep Batch Number(s):	GN59559, OP33113, OP33119, VE1519, VR775
ER# ¹	Description		
1	For reporting purposes, the MQL is defined in the report as the RL. The unadjusted MQL/RL is reported in the method blank. The SDL is defined in the report as the MDL.		
2	For reporting purposes, the method blank represents the unadjusted MQL. The DCS is on file in the laboratory and is not included in the laboratory data package.		
3	The laboratory is NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices, and methods associated with this laboratory data package for analytes that are listed in the Texas Fields of Accreditation.		

¹ER# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked on

7.3.2
7

the 1990s, the number of people in the UK who are aged 65 and over has increased from 10.5 million to 13.5 million (19.5% of the population).

There is a growing awareness of the need to address the needs of older people, and the Government has set out a strategy for the 21st century in the White Paper on *Ageing Better: Our Future* (Department of Health 2000). This strategy is based on the following principles:

- Older people should be able to live independently and actively in their own homes.
- Older people should be able to live in their own communities.
- Older people should be able to live in their own homes and communities for as long as possible.
- Older people should be able to live in their own homes and communities with dignity and respect.

These principles are reflected in the following objectives of the strategy:

- To ensure that older people are able to live independently and actively in their own homes.
- To ensure that older people are able to live in their own communities.
- To ensure that older people are able to live in their own homes and communities for as long as possible.
- To ensure that older people are able to live in their own homes and communities with dignity and respect.

The strategy also sets out a number of key actions to be taken to achieve these objectives:

- To ensure that older people are able to live independently and actively in their own homes.
- To ensure that older people are able to live in their own communities.
- To ensure that older people are able to live in their own homes and communities for as long as possible.
- To ensure that older people are able to live in their own homes and communities with dignity and respect.

The strategy also sets out a number of key actions to be taken to achieve these objectives:

- To ensure that older people are able to live independently and actively in their own homes.
- To ensure that older people are able to live in their own communities.
- To ensure that older people are able to live in their own homes and communities for as long as possible.
- To ensure that older people are able to live in their own homes and communities with dignity and respect.

The strategy also sets out a number of key actions to be taken to achieve these objectives:

- To ensure that older people are able to live independently and actively in their own homes.
- To ensure that older people are able to live in their own communities.
- To ensure that older people are able to live in their own homes and communities for as long as possible.
- To ensure that older people are able to live in their own homes and communities with dignity and respect.

The strategy also sets out a number of key actions to be taken to achieve these objectives:

- To ensure that older people are able to live independently and actively in their own homes.
- To ensure that older people are able to live in their own communities.
- To ensure that older people are able to live in their own homes and communities for as long as possible.
- To ensure that older people are able to live in their own homes and communities with dignity and respect.

The strategy also sets out a number of key actions to be taken to achieve these objectives:

- To ensure that older people are able to live independently and actively in their own homes.
- To ensure that older people are able to live in their own communities.
- To ensure that older people are able to live in their own homes and communities for as long as possible.
- To ensure that older people are able to live in their own homes and communities with dignity and respect.

Soil samples reported on a dry weight basis unless otherwise indicated on result page.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Berg Oliver Associates

Job No TC50980

Site: Memorial Drive, Houston, TX/7312-H-P2

Report Date 7/10/2014 4:37:36 PM

6 Samples were collected on 07/03/2014 and received intact at Accutest on 07/03/2014 and properly preserved in 1 cooler at 2 Deg C. These Samples received an Accutest job number of TC50980. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260C

Matrix AQ **Batch ID:** VE1519

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) TC51210-2MS, TC51210-2MSD were used as the QC samples indicated.

Matrix SO **Batch ID:** VR775

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) TC50948-IMS, TC50948-IMS D were used as the QC samples indicated.

Matrix SO **Batch ID:** VR776

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) TC50980-5MS, TC50980-5MSD were used as the QC samples indicated.

Extractables by GC By Method TNRCC 1005

Matrix AQ **Batch ID:** OP33119

- All samples were extracted within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) TC50998-17MS, TC50998-17MSD were used as the QC samples indicated.

Matrix SO **Batch ID:** OP33113

- All samples were extracted within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- Sample(s) TC50925-IMS, TC50925-IMS D were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

Wet Chemistry By Method SM 2540 G

Matrix SO **Batch ID:** GN59558

- Sample(s) TC50862-IDUP were used as the QC samples for Solids, Percent.

Accutest Laboratories Gulf Coast (ALGC) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALGC and as stated on the COC. ALGC certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALGC Quality Manual except as noted above. This report is to be used in its entirety. ALGC is not responsible for any assumptions of data quality if partial data packages are used

Summary of Hits

Job Number: TC50980
Account: Berg Oliver Associates
Project: Memorial Drive, Houston, TX/7312-H-P2
Collected: 07/03/14

TC50980: Chain of Custody

Page 3 of 3

Appendix A Laboratory Data Package Cover Page

TC50980 This data package consists of

- This signature page, the laboratory review checklist, and the following reportable data:
- R1 Field chain-of-custody documentation;
- R2 Sample identification cross-reference;
- R3 Test reports (analytical data sheets) for each environmental sample that includes:
 - a) Items consistent with NELAC 5.13 or ISO/IEC 17025 Section 5.10
 - b) dilution factors,
 - c) preparation methods,
 - d) cleanup methods, and
 - e) if required for the project, tentatively identified compounds (TICs).
- R4 Surrogate recovery data including:
 - a) Calculated recovery (%R), and
 - b) The laboratory's surrogate QC limits.
- R5 Test reports/summary forms for blank samples;
- R6 Test reports/summary forms for laboratory control samples (LCSs) including:
 - a) LCS spiking amounts,
 - b) Calculated %R for each analyte, and
 - c) The laboratory's LCS QC limits.
- R7 Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including:
 - a) Samples associated with the MS/MSD clearly identified,
 - b) MS/MSD spiking amounts,
 - c) Concentration of each MS/MSD analyte measured in the parent and
 - d) Calculated %Rs and relative percent differences (RPDs), and
 - e) The laboratory's MS/MSD QC limits
- R8 Laboratory analytical duplicate (if applicable) recovery and precision:
 - a) The amount of analyte measured in the duplicate,
 - b) The calculated RPD, and
 - c) The laboratory's QC limits for analytical duplicates.
- R9 List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each
- R10 Other problems or anomalies.

The Exception Report for each "No" or "Not Reviewed (NR)" item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted in the Exception Report. This data package has been reviewed by the laboratory and is complete and technically compliant with the requirements of the methods used, except where noted by the laboratory in the attached exception reports. By my signature below, I affirm to the best of my knowledge, all problems/anomalies, observed by the laboratory as having the potential to affect the quality of the data, have been identified by the laboratory in the Laboratory Review Checklist, and no information or data have been knowingly withheld.

Check, if applicable: This laboratory meets an exception under 30 TAC&25.6 and was last inspection by [] TCEQ or [X] _____ on April 2011. Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

LABORATORY REVIEW CHECKLIST: REPORTABLE DATA										
Laboratory Name:		Accutest Gulf Coast		LRC Date:		7/10/2014				
Project Name:		Memorial Drive, Houston, TX/7312-H-P2		Laboratory Project Number:		TC50980				
Reviewer Name:		Anita Patel		Prep Batch Number(s):		GN59558, OP33113, OP33119, VE1519, VR775, VR776				
# ¹	A ²	DESCRIPTION				YES	NO	NA ³	NR ⁴	ER # ⁵
R1	OI	CHAIN-OF-CUSTODY (C-O-C):								
		Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?				X				
		Were all departures from standard conditions described in an exception report?				X				
R2	OI	Sample and quality control (QC) identification								
		Are all field sample ID numbers cross-referenced to the laboratory ID numbers?				X				
		Are all laboratory ID numbers cross-referenced to the corresponding QC data?				X				
R3	OI	Test reports								
		Were samples prepared and analyzed within holding times?				X				
		Other than those results <MQL, were all other raw values bracketed by calibration standards?				X				
		Were calculations checked by a peer or supervisor?				X				
		Were all analyte identifications checked by a peer or supervisor?				X				
		Were sample detection limits reported for all analytes not detected?				X				
		Were all results for soil and sediment samples reported on a dry weight basis?				X				
		Were % moisture (or solids) reported for all soil and sediment samples?				X				
		Were bulk soils/solids samples for volatile analysis extracted with methanol per SW846 Method 5035?				X				
		If required for the project, are TIC's reported?						X		
R4	O	Surrogate recovery data								
		Were surrogates added prior to extraction?				X				
		Were surrogate percent recoveries in all samples within the laboratory QC limits?				X				
R5	OI	Test reports/summary forms for blank samples								
		Were appropriate type(s) of blanks analyzed?				X				
		Were blanks analyzed at the appropriate frequency?				X				
		Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?				X				
		Were blank concentrations <MQL?				X				
R6	OI	Laboratory control samples (LCS):								
		Were all COCs included in the LCS?				X				
		Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?				X				
		Were LCSs analyzed at required frequency?				X				
		Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?				X				
		Does the detectability check sample data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?				X				
		Was the LCSD RPD within QC limits?				X				
R7	OI	Matrix spike (MS) and matrix spike duplicate (MSD) data								
		Were the project/method specified analytes included in the MS and MSD?				X				
		Were MS/MSD analyzed at the appropriate frequency?				X				
		Were MS (and MSD, if applicable) %Rs within the laboratory QC Limits?				X				
		Were the MS/MSD RPDs within laboratory QC limits?				X				
R8	OI	Analytical duplicate data								
		Were appropriate analytical duplicates analyzed for each matrix?				X				
		Were analytical duplicates analyzed at the appropriate frequency?				X				
		Were RPDs or relative standard deviations within the laboratory QC limits?				X				
R9	OI	Method quantitation limits (MQLs):								
		Are the MQLs for each method analyte included in the laboratory data package?				X				
		Do the MQLs correspond to the concentration of the lowest non-zero calibration				X				
		Are unadjusted MQLs and DCSs included in the laboratory data package?					X			2
R10	OI	Other problems/anomalies								
		Are all known problems/anomalies/special conditions noted in this LRC and ER?				X				
		Was applicable and available technology used to lower the SDL to minimize the				X				
		Is the laboratory NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices, and methods associated with this laboratory data package?				X				3

Laboratory Name:		Accutest Gulf Coast	LRC Date:		7/10/2014

Reviewer Name:		Anita Patel	Prep Batch Number(s):		GN59558, OP33113, OP33119, VE1519, VR775, VR776		
# ¹	A ²	DESCRIPTION	YES	NO	NA ³	NR ⁴	ER # ⁵
S1	OI	Initial calibration (ICAL)					
		Were response factors and/or relative response factors for each analyte within QC limits?	X				
		Were percent RSDs or correlation coefficient criteria met?	X				
		Was the number of standards recommended in the method used for all analytes?	X				
		Were all points generated between the lowest and highest standard used to calculate the curve?	X				
		Are ICAL data available for all instruments used?	X				
		Has the initial calibration curve been verified using an appropriate second source standard?	X				
S2	OI	Initial and continuing calibration verification (ICCV AND CCV) and continuing					
		Was the CCV analyzed at the method-required frequency?	X				
		Were percent differences for each analyte within the method-required QC limits?	X				
		Was the ICAL curve verified for each analyte?	X				
		Was the absolute value of the analyte concentration in the inorganic CCB<MDL?			X		
S3	O	Mass spectral tuning					
		Was the appropriate compound for the method used for tuning?	X				
		Were ion abundance data within the method-required QC limits?	X				
S4	O	Internal standards (IS)					
		Were IS area counts and retention times within the method-required QC limits?	X				
S5	OI	Raw data (NELAC Section 5.5.10)					
		Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
		Were data associated with manual integrations flagged on the raw data?	X				
S6	O	Dual column confirmation					
		Did dual column confirmation results meet the method-required QC?			X		
S7	O	Tentatively identified compounds (TICs):					
		If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
S8	I	Interference Check Sample (ICS) results					
		Were percent recoveries within method QC limits?			X		
S9	I	Serial dilutions, post digestion spikes, and method of standard additions					
		Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
S10	OI	Method detection limit (MDL) studies					
		Was a MDL study performed for each reported analyte?	X				
		Is the MDL either adjusted or supported by the analysis of DCSs?	X				
S11	OI	Proficiency test reports					
		Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
S12	OI	Standards documentation					
		Are all standards used in the analyses NIST-traceable or obtained from other appropriate source?	X				
S13	OI	Compound/analyte identification procedures					
		Are the procedures for compound/analyte identification documented?	X				
S14	OI	Demonstration of analyst competency (DOC)					
		Was DOC conducted consistent with NELAC Chapter 5?	X				
		Is documentation of the analyst's competency up-to-date and on file?	X				
S15	OI	Verification/validation documentation for methods (NELAC Chapter 5)					
		Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
S16	OI	Laboratory standard operating procedures (SOPs)					
		Are laboratory SOPs current and on file for each method performed?	X				

LABORATORY REVIEW CHECKLIST (continued): Exception Reports			
Laboratory Name:	Accutest Gulf Coast	LRC Date:	7/10/2014
Project Name:	Memorial Drive, Houston, TX/731	Laboratory Project Number:	TC50980
Reviewer Name:	Anita Patel	Prep Batch Number(s):	GN59558, OP33113, OP33119, VE1519, VR775, VR776
ER# ¹	Description		
1	For reporting purposes, the MQL is defined in the report as the RL. The unadjusted MQL/RL is reported in the method blank. The SDL is defined in the report as the MDL.		
2	For reporting purposes, the method blank represents the unadjusted MQL. The DCS is on file in the laboratory and is not included in the laboratory data package.		
3	The laboratory is NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices, and methods associated with this laboratory data package for analytes that are listed in the Texas Fields of Accreditation.		

1ER# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked on

the *Journal of Applied Behavior Analysis* (1974), and the *Journal of Experimental Psychology* (1975).

There are a number of reasons why the *Journal of Applied Behavior Analysis* is the most widely cited journal in the field of behavior analysis.

First, the journal is published by the American Psychological Association, which is the largest and most prestigious organization in the field of psychology.

Second, the journal is published quarterly, which allows for a high volume of research to be published.

Third, the journal is published in English, which is the most widely spoken language in the world.

Fourth, the journal is published in a format that is easy to read and understand, which makes it accessible to a wide range of researchers and practitioners.

Fifth, the journal is published in a format that is easy to search and retrieve, which makes it convenient for researchers to find the articles they need.

Sixth, the journal is published in a format that is easy to cite, which makes it convenient for researchers to cite the articles they use.

Seventh, the journal is published in a format that is easy to archive, which makes it convenient for researchers to store the articles they use.

Eighth, the journal is published in a format that is easy to disseminate, which makes it convenient for researchers to share the articles they use.

Ninth, the journal is published in a format that is easy to access, which makes it convenient for researchers to read the articles they use.

Tenth, the journal is published in a format that is easy to use, which makes it convenient for researchers to work with the articles they use.

Eleventh, the journal is published in a format that is easy to understand, which makes it convenient for researchers to read the articles they use.

Twelfth, the journal is published in a format that is easy to remember, which makes it convenient for researchers to recall the articles they use.

Thirteenth, the journal is published in a format that is easy to repeat, which makes it convenient for researchers to use the articles they use.

Fourteenth, the journal is published in a format that is easy to review, which makes it convenient for researchers to evaluate the articles they use.

Fifteenth, the journal is published in a format that is easy to discuss, which makes it convenient for researchers to talk about the articles they use.

Sixteenth, the journal is published in a format that is easy to write, which makes it convenient for researchers to create the articles they use.

Seventeenth, the journal is published in a format that is easy to edit, which makes it convenient for researchers to improve the articles they use.

Eighteenth, the journal is published in a format that is easy to proofread, which makes it convenient for researchers to correct the articles they use.

Nineteenth, the journal is published in a format that is easy to format, which makes it convenient for researchers to style the articles they use.

Twentieth, the journal is published in a format that is easy to print, which makes it convenient for researchers to produce the articles they use.

Twenty-first, the journal is published in a format that is easy to scan, which makes it convenient for researchers to view the articles they use.

Twenty-second, the journal is published in a format that is easy to zoom, which makes it convenient for researchers to enlarge the articles they use.

Twenty-third, the journal is published in a format that is easy to rotate, which makes it convenient for researchers to turn the articles they use.

Twenty-fourth, the journal is published in a format that is easy to crop, which makes it convenient for researchers to trim the articles they use.

Twenty-fifth, the journal is published in a format that is easy to copy, which makes it convenient for researchers to duplicate the articles they use.

Twenty-sixth, the journal is published in a format that is easy to paste, which makes it convenient for researchers to insert the articles they use.

Twenty-seventh, the journal is published in a format that is easy to delete, which makes it convenient for researchers to remove the articles they use.

Twenty-eighth, the journal is published in a format that is easy to undo, which makes it convenient for researchers to revert the articles they use.

Twenty-ninth, the journal is published in a format that is easy to redo, which makes it convenient for researchers to repeat the articles they use.

Thirtieth, the journal is published in a format that is easy to save, which makes it convenient for researchers to store the articles they use.

Thirty-first, the journal is published in a format that is easy to open, which makes it convenient for researchers to load the articles they use.

Thirty-second, the journal is published in a format that is easy to close, which makes it convenient for researchers to unload the articles they use.

Thirty-third, the journal is published in a format that is easy to quit, which makes it convenient for researchers to exit the articles they use.

Thirty-fourth, the journal is published in a format that is easy to restart, which makes it convenient for researchers to begin the articles they use.

Thirty-fifth, the journal is published in a format that is easy to stop, which makes it convenient for researchers to end the articles they use.

Thirty-sixth, the journal is published in a format that is easy to pause, which makes it convenient for researchers to suspend the articles they use.

TC51149-8	07/08/14	00:00	07/08/14	AQ	Trip Blank Water	TRIP BLANK

Soil samples reported on a dry weight basis unless otherwise indicated on result page.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Berg Oliver Associates

Job No TC51149

Site: Memorial Drive, Houston, TX/7312-H-P2

Report Date 7/15/2014 1:51:17 PM

7 Samples were collected on 07/08/2014 and received intact at Accutest on 07/08/2014 and properly preserved in 1 cooler at 4 Deg C. These Samples received an Accutest job number of TC51149. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260C

Matrix AQ **Batch ID:** VZ4350

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) TC50647-15MS, TC50647-15MSD were used as the QC samples indicated.

Matrix SO **Batch ID:** VY3679

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) TC51188-1MS, TC51188-1MSD were used as the QC samples indicated.

Matrix SO **Batch ID:** VY3680

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) TC51149-4MS, TC51149-4MSD were used as the QC samples indicated.

Extractables by GC By Method TNRCC 1005

Matrix AQ **Batch ID:** OP33164

- All samples were extracted within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) TC51207-3MS, TC51207-3MSD were used as the QC samples indicated.

Matrix SO **Batch ID:** OP33148

- All samples were extracted within the recommended method holding time.
- All samples were analyzed within the recommended method holding time.
- Sample(s) TC51149-5MS, TC51149-5MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

Wet Chemistry By Method SM 2540 G

Matrix SO **Batch ID:** GN59618

- Sample(s) TC51105-IDUP were used as the QC samples for Solids, Percent.

Accutest Laboratories Gulf Coast (ALGC) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALGC and as stated on the COC. ALGC certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALGC Quality Manual except as noted above. This report is to be used in its entirety. ALGC is not responsible for any assumptions of data quality if partial data packages are used

TC51149: Chain of Custody

Page 4 of 4

Appendix A Laboratory Data Package Cover Page

TC51149 This data package consists of

- This signature page, the laboratory review checklist, and the following reportable data:
- R1 Field chain-of-custody documentation;
- R2 Sample identification cross-reference;
- R3 Test reports (analytical data sheets) for each environmental sample that includes:
 - a) Items consistent with NELAC 5.13 or ISO/IEC 17025 Section 5.10
 - b) dilution factors,
 - c) preparation methods,
 - d) cleanup methods, and
 - e) if required for the project, tentatively identified compounds (TICs).
- R4 Surrogate recovery data including:
 - a) Calculated recovery (%R), and
 - b) The laboratory's surrogate QC limits.
- R5 Test reports/summary forms for blank samples;
- R6 Test reports/summary forms for laboratory control samples (LCSs) including:
 - a) LCS spiking amounts,
 - b) Calculated %R for each analyte, and
 - c) The laboratory's LCS QC limits.
- R7 Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including:
 - a) Samples associated with the MS/MSD clearly identified,
 - b) MS/MSD spiking amounts,
 - c) Concentration of each MS/MSD analyte measured in the parent and
 - d) Calculated %Rs and relative percent differences (RPDs), and
 - e) The laboratory's MS/MSD QC limits
- R8 Laboratory analytical duplicate (if applicable) recovery and precision:
 - a) The amount of analyte measured in the duplicate,
 - b) The calculated RPD, and
 - c) The laboratory's QC limits for analytical duplicates.
- R9 List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each
- R10 Other problems or anomalies.

The Exception Report for each "No" or "Not Reviewed (NR)" item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted in the Exception Report. This data package has been reviewed by the laboratory and is complete and technically compliant with the requirements of the methods used, except where noted by the laboratory in the attached exception reports. By my signature below, I affirm to the best of my knowledge, all problems/anomalies, observed by the laboratory as having the potential to affect the quality of the data, have been identified by the laboratory in the Laboratory Review Checklist, and no information or data have been knowingly withheld.

Check, if applicable: This laboratory meets an exception under 30 TAC&25.6 and was last inspection by

[] [X] TCEQ or [] _____ on April 2011. Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

LABORATORY REVIEW CHECKLIST: REPORTABLE DATA						
Laboratory Name:		Accutest Gulf Coast	LRC Date:		7/15/2014	
Project Name:		Memorial Drive, Houston, TX/7312-H-P2	Laboratory Project Number:		TC51149	
Reviewer Name:		Anita Patel	Prep Batch Number(s):		GN59618, OP33148, OP33164, VY3679, VY3680, VZ4350	
# ¹	A ²	DESCRIPTION	YES	NO	NA ³	NR ⁴ ER # ⁵
R1	OI	CHAIN-OF-CUSTODY (C-O-C):				
		Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X			
		Were all departures from standard conditions described in an exception report?	X			
R2	OI	Sample and quality control (QC) identification				
		Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X			
		Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X			
R3	OI	Test reports				
		Were samples prepared and analyzed within holding times?	X			
		Other than those results <MQL, were all other raw values bracketed by calibration standards?	X			
		Were calculations checked by a peer or supervisor?	X			
		Were all analyte identifications checked by a peer or supervisor?	X			
		Were sample detection limits reported for all analytes not detected?	X			
		Were all results for soil and sediment samples reported on a dry weight basis?	X			
		Were % moisture (or solids) reported for all soil and sediment samples?	X			
		Were bulk soils/solids samples for volatile analysis extracted with methanol per SW846 Method 5035?	X			
		If required for the project, are TIC's reported?			X	
R4	O	Surrogate recovery data				
		Were surrogates added prior to extraction?	X			
		Were surrogate percent recoveries in all samples within the laboratory QC limits?	X			
R5	OI	Test reports/summary forms for blank samples				
		Were appropriate type(s) of blanks analyzed?	X			
		Were blanks analyzed at the appropriate frequency?	X			
		Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X			
		Were blank concentrations <MQL?	X			
R6	OI	Laboratory control samples (LCS):				
		Were all COCs included in the LCS?	X			
		Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X			
		Were LCSs analyzed at required frequency?	X			
		Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	X			
		Does the detectability check sample data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X			
		Was the LCSD RPD within QC limits?	X			
R7	OI	Matrix spike (MS) and matrix spike duplicate (MSD) data				
		Were the project/method specified analytes included in the MS and MSD?	X			
		Were MS/MSD analyzed at the appropriate frequency?	X			
		Were MS (and MSD, if applicable) %Rs within the laboratory QC Limits?	X			
		Were the MS/MSD RPDs within laboratory QC limits?	X			
R8	OI	Analytical duplicate data				
		Were appropriate analytical duplicates analyzed for each matrix?	X			
		Were analytical duplicates analyzed at the appropriate frequency?	X			
		Were RPDs or relative standard deviations within the laboratory QC limits?	X			
R9	OI	Method quantitation limits (MQLs):				
		Are the MQLs for each method analyte included in the laboratory data package?	X			
		Do the MQLs correspond to the concentration of the lowest non-zero calibration?	X			
		Are unadjusted MQLs and DCSSs included in the laboratory data package?		X		2
R10	OI	Other problems/anomalies				
		Are all known problems/anomalies/special conditions noted in this LRC and ER?	X			
		Was applicable and available technology used to lower the SDL to minimize the	X			
		Is the laboratory NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices, and methods associated with this laboratory data package?	X			3

# ¹	A ²	DESCRIPTION	YES	NO	NA ³	NR ⁴ ER # ⁵
S1	OI	Initial calibration (ICAL)				
		Were response factors and/or relative response factors for each analyte within QC limits?	X			
		Were percent RSDs or correlation coefficient criteria met?	X			
		Was the number of standards recommended in the method used for all analytes?	X			
		Were all points generated between the lowest and highest standard used to calculate the curve?	X			
		Are ICAL data available for all instruments used?	X			
		Has the initial calibration curve been verified using an appropriate second source standard?	X			
S2	OI	Initial and continuing calibration verification (ICCV AND CCV) and continuing				
		Was the CCV analyzed at the method-required frequency?	X			
		Were percent differences for each analyte within the method-required QC limits?	X			
		Was the ICAL curve verified for each analyte?	X			
		Was the absolute value of the analyte concentration in the inorganic CCB < MDL?			X	
S3	O	Mass spectral tuning				
		Was the appropriate compound for the method used for tuning?	X			
		Were ion abundance data within the method-required QC limits?	X			
S4	O	Internal standards (IS)				
		Were IS area counts and retention times within the method-required QC limits?	X			
S5	OI	Raw data (NELAC Section 5.5.10)				
		Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X			
		Were data associated with manual integrations flagged on the raw data?	X			
S6	O	Dual column confirmation				
		Did dual column confirmation results meet the method-required QC?			X	
S7	O	Tentatively identified compounds (TICs):				
		If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X	
S8	I	Interference Check Sample (ICS) results				
		Were percent recoveries within method QC limits?			X	
S9	I	Serial dilutions, post digestion spikes, and method of standard additions				
		Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X	
S10	OI	Method detection limit (MDL) studies				
		Was a MDL study performed for each reported analyte?	X			
		Is the MDL either adjusted or supported by the analysis of DCSs?	X			
S11	OI	Proficiency test reports				
		Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X			
S12	OI	Standards documentation				
		Are all standards used in the analyses NIST-traceable or obtained from other appropriate source?	X			
S13	OI	Compound/analyte identification procedures				
		Are the procedures for compound/analyte identification documented?	X			
S14	OI	Demonstration of analyst competency (DOC)				
		Was DOC conducted consistent with NELAC Chapter 5?	X			
		Is documentation of the analyst's competency up-to-date and on file?	X			
S15	OI	Verification/validation documentation for methods (NELAC Chapter 5)				
		Are all the methods used to generate the data documented, verified, and validated, where applicable?	X			
S16	OI	Laboratory standard operating procedures (SOPs)				
		Are laboratory SOPs current and on file for each method performed?	X

LABORATORY REVIEW CHECKLIST (continued): Exception Reports			
Laboratory Name:	Accutest Gulf Coast	LRC Date:	7/15/2014
Project Name:	Memorial Drive, Houston, TX/731	Laboratory Project Number:	TC51149
Reviewer Name:	Anita Patel	Prep Batch Number(s):	GN59618, OP33148, OP33164, VY3679, VY3680, VZ4350
ER# ¹	Description		
1	For reporting purposes, the MQL is defined in the report as the RL. The unadjusted MQL/RL is reported in the method blank. The SDL is defined in the report as the MDL.		
2	For reporting purposes, the method blank represents the unadjusted MQL. The DCS is on file in the laboratory and is not included in the laboratory data package.		
3	The laboratory is NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices, and methods associated with this laboratory data package for analytes that are listed in the Texas Fields of Accreditation.		

1ER# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked on

the *Journal of Applied Behavior Analysis* (1974), and the *Journal of Experimental Psychology* (1975).

There are a number of reasons why the *Journal of Applied Behavior Analysis* is the most widely cited journal in the field.

First, the journal is published by the American Psychological Association, which is the largest and most prestigious organization in the field.

Second, the journal is published quarterly, which allows for a high volume of research to be published.

Third, the journal is published in a format that is easy to read and understand, which makes it accessible to a wide range of researchers.

Finally, the journal is published in a format that is easy to cite, which makes it a popular choice for researchers.

There are a number of other journals in the field, but none have the same level of prestige and influence as the *Journal of Applied Behavior Analysis*.

The *Journal of Experimental Psychology* is another highly cited journal in the field, but it is more focused on basic research.

The *Journal of Behavior Analysis and Modification* is also a highly cited journal, but it is more focused on applied research.

The *Journal of Applied Behavior Analysis* is the most widely cited journal in the field because it is the most accessible and most influential.

It is the most widely cited journal in the field because it is the most accessible and most influential.

Soil samples reported on a dry weight basis unless otherwise indicated on result page.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Berg Oliver Associates

Job No TC51322

Site: Memorial Drive, Houston, TX/7312-H-P2

Report Date 7/17/2014 4:43:10 PM

10 Samples were collected on 07/09/2014 and received intact at Accutest on 07/10/2014 and properly preserved in 1 cooler at 4 Deg C. These Samples received an Accutest job number of TC51322. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260C

Matrix AQ **Batch ID:** VG1385

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) TC50998-2MS, TC50998-2MSD were used as the QC samples indicated.
- Matrix Spike/Matrix Spike Duplicate Recovery(s) for 1,1-Dichloroethylene are outside control limits. Probable cause due to matrix interference.

Matrix AQ **Batch ID:** VZ4352

- All samples were analyzed within the recommended method holding time.
- Sample(s) TC51346-3MS, TC51346-3MSD were used as the QC samples indicated.
- All method blanks for this batch meet method specific criteria.

Matrix SO **Batch ID:** VX2265

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) TC51422-5MS, TC51422-5MSD were used as the QC samples indicated.
- Matrix Spike/Matrix Spike Duplicate Recovery(s) for Chloroethane, Methyl bromide are outside control limits. Probable cause due to matrix interference.

Matrix SO **Batch ID:** VX2266

- All samples were analyzed within the recommended method holding time.
- All method blanks for this batch meet method specific criteria.
- Sample(s) TC51152-17MS, TC51152-17MSD were used as the QC samples indicated.

Extractables by GC By Method TNRCC 1005

Matrix AQ	Batch ID: OP33179
------------------	--------------------------

- ▣ All samples were extracted within the recommended method holding time.
- ▣ All samples were analyzed within the recommended method holding time.
- ▣ Sample(s) TC51305-1MS, TC51305-1MSD were used as the QC samples indicated.
- ▣ All method blanks for this batch meet method specific criteria.

Matrix SO	Batch ID: OP33184
------------------	--------------------------

- ▣ All samples were extracted within the recommended method holding time.
- ▣ All samples were analyzed within the recommended method holding time.
- ▣ Sample(s) TC51387-1MS, TC51387-1MSD were used as the QC samples indicated.
- ▣ All method blanks for this batch meet method specific criteria.
- ▣ Sample(s) OP33184-MS have surrogates outside control limits. Probable cause due to matrix interference.

Wet Chemistry By Method SM 2540 G

Matrix SO	Batch ID: GN59728
------------------	--------------------------

- ▣ Sample(s) TC51322-1DUP were used as the QC samples for Solids, Percent.

Accutest Laboratories Gulf Coast (ALGC) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALGC and as stated on the COC. ALGC certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALGC Quality Manual except as noted above. This report is to be used in its entirety. ALGC is not responsible for any assumptions of data quality if partial data packages are used

TC51322: Chain of Custody

Page 4 of 4

Appendix A Laboratory Data Package Cover Page

TC51322 This data package consists of

- This signature page, the laboratory review checklist, and the following reportable data:
- R1 Field chain-of-custody documentation;
- R2 Sample identification cross-reference;
- R3 Test reports (analytical data sheets) for each environmental sample that includes:
 - a) Items consistent with NELAC 5.13 or ISO/IEC 17025 Section 5.10
 - b) dilution factors,
 - c) preparation methods,
 - d) cleanup methods, and
 - e) if required for the project, tentatively identified compounds (TICs).
- R4 Surrogate recovery data including:
 - a) Calculated recovery (%R), and
 - b) The laboratory's surrogate QC limits.
- R5 Test reports/summary forms for blank samples;
- R6 Test reports/summary forms for laboratory control samples (LCSs) including:
 - a) LCS spiking amounts,
 - b) Calculated %R for each analyte, and
 - c) The laboratory's LCS QC limits.
- R7 Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including:
 - a) Samples associated with the MS/MSD clearly identified,
 - b) MS/MSD spiking amounts,
 - c) Concentration of each MS/MSD analyte measured in the parent and
 - d) Calculated %Rs and relative percent differences (RPDs), and
 - e) The laboratory's MS/MSD QC limits
- R8 Laboratory analytical duplicate (if applicable) recovery and precision:
 - a) The amount of analyte measured in the duplicate,
 - b) The calculated RPD, and
 - c) The laboratory's QC limits for analytical duplicates.
- R9 List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each
- R10 Other problems or anomalies.

The Exception Report for each "No" or "Not Reviewed (NR)" item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted in the Exception Report. This data package has been reviewed by the laboratory and is complete and technically compliant with the requirements of the methods used, except where noted by the laboratory in the attached exception reports. By my signature below, I affirm to the best of my knowledge, all problems/anomalies, observed by the laboratory as having the potential to affect the quality of the data, have been identified by the laboratory in the Laboratory Review Checklist, and no information or data have been knowingly withheld.

Check, if applicable: This laboratory meets an exception under 30 TAC&25.6 and was last inspection by

[X] TCEQ or [] _____ on April 2011. Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

LABORATORY REVIEW CHECKLIST: REPORTABLE DATA						
Laboratory Name:		Accutest Gulf Coast	LRC Date:		7/17/2014	
Project Name:		Memorial Drive, Houston, TX/7312-H-P2	Laboratory Project Number:		TC51322	
Reviewer Name:		Anita Patel	Prep Batch Number(s):		GN59728, OP33179, OP33184, VG1385, VX2265, VX2266, VZ4352	
# ¹	A ²	DESCRIPTION	YES	NO	NA ³	NR ⁴ ER # ⁵
R1	OI	CHAIN-OF-CUSTODY (C-O-C):				
		Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?	X			
		Were all departures from standard conditions described in an exception report?	X			
R2	OI	Sample and quality control (QC) identification				
		Are all field sample ID numbers cross-referenced to the laboratory ID numbers?	X			
		Are all laboratory ID numbers cross-referenced to the corresponding QC data?	X			
R3	OI	Test reports				
		Were samples prepared and analyzed within holding times?	X			
		Other than those results <MQL, were all other raw values bracketed by calibration standards?	X			
		Were calculations checked by a peer or supervisor?	X			
		Were all analyte identifications checked by a peer or supervisor?	X			
		Were sample detection limits reported for all analytes not detected?	X			
		Were all results for soil and sediment samples reported on a dry weight basis?	X			
		Were % moisture (or solids) reported for all soil and sediment samples?	X			
		Were bulk soils/solids samples for volatile analysis extracted with methanol per SW846 Method 5035?	X			
		If required for the project, are TIC's reported?			X	
R4	O	Surrogate recovery data				
		Were surrogates added prior to extraction?	X			
		Were surrogate percent recoveries in all samples within the laboratory QC limits?		X		4
R5	OI	Test reports/summary forms for blank samples				
		Were appropriate type(s) of blanks analyzed?	X			
		Were blanks analyzed at the appropriate frequency?	X			
		Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?	X			
		Were blank concentrations <MQL?	X			
R6	OI	Laboratory control samples (LCS):				
		Were all COCs included in the LCS?	X			
		Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?	X			
		Were LCSs analyzed at required frequency?	X			
		Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?	X			
		Does the detectability check sample data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?	X			
		Was the LCSD RPD within QC limits?	X			
R7	OI	Matrix spike (MS) and matrix spike duplicate (MSD) data				
		Were the project/method specified analytes included in the MS and MSD?	X			
		Were MS/MSD analyzed at the appropriate frequency?	X			
		Were MS (and MSD, if applicable) %Rs within the laboratory QC Limits?		X		4
		Were the MS/MSD RPDs within laboratory QC limits?	X			
R8	OI	Analytical duplicate data				
		Were appropriate analytical duplicates analyzed for each matrix?	X			
		Were analytical duplicates analyzed at the appropriate frequency?	X			
		Were RPDs or relative standard deviations within the laboratory QC limits?	X			
R9	OI	Method quantitation limits (MQLs):				
		Are the MQLs for each method analyte included in the laboratory data package?	X			
		Do the MQLs correspond to the concentration of the lowest non-zero calibration	X			
		Are unadjusted MQLs and DCSs included in the laboratory data package?		X		2
R10	OI	Other problems/anomalies				
		Are all known problems/anomalies/special conditions noted in this LRC and ER?	X			
		Was applicable and available technology used to lower the SDL to minimize the	X			
		Is the laboratory NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices, and methods associated with this laboratory data package?	X			3

Laboratory Name:		Accutest Gulf Coast	LRC Date:		7/17/2014				
Project Name:		Memorial Drive, Houston, TX/731	Laboratory Project Number:		TC51322				
Reviewer Name:		Anita Patel	Prep Batch Number(s):		GN59728, OP33179, OP33184, VG1385, VX2265, VX2266, VZ4352				
# ¹	A ²	DESCRIPTION	YES	NO	NA ³	NR ⁴	ER # ⁵		
S1	OI	Initial calibration (ICAL)							
		Were response factors and/or relative response factors for each analyte within QC limits?	X						
		Were percent RSDs or correlation coefficient criteria met?	X						
		Was the number of standards recommended in the method used for all analytes?	X						
		Were all points generated between the lowest and highest standard used to calculate the curve?	X						
		Are ICAL data available for all instruments used?	X						
		Has the initial calibration curve been verified using an appropriate second source standard?	X						
S2	OI	Initial and continuing calibration verification (ICCV AND CCV) and continuing							
		Was the CCV analyzed at the method-required frequency?	X						
		Were percent differences for each analyte within the method-required QC limits?	X						
		Was the ICAL curve verified for each analyte?	X						
		Was the absolute value of the analyte concentration in the inorganic CCB < MDL?				X			
S3	O	Mass spectral tuning							
		Was the appropriate compound for the method used for tuning?	X						
		Were ion abundance data within the method-required QC limits?	X						
S4	O	Internal standards (IS)							
		Were IS area counts and retention times within the method-required QC limits?	X						
S5	OI	Raw data (NELAC Section 5.5.10)							
		Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X						
		Were data associated with manual integrations flagged on the raw data?	X						
S6	O	Dual column confirmation							
		Did dual column confirmation results meet the method-required QC?			X				
S7	O	Tentatively identified compounds (TICs):							
		If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X				
S8	I	Interference Check Sample (ICS) results							
		Were percent recoveries within method QC limits?			X				
S9	I	Serial dilutions, post digestion spikes, and method of standard additions							
		Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X				
S10	OI	Method detection limit (MDL) studies							
		Was a MDL study performed for each reported analyte?	X						
		Is the MDL either adjusted or supported by the analysis of DCSs?	X						
S11	OI	Proficiency test reports							
		Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X						
S12	OI	Standards documentation							
		Are all standards used in the analyses NIST-traceable or obtained from other appropriate source?	X						
S13	OI	Compound/analyte identification procedures							
		Are the procedures for compound/analyte identification documented?	X						
S14	OI	Demonstration of analyst competency (DOC)							
		Was DOC conducted consistent with NELAC Chapter 5?	X						
		Is documentation of the analyst's competency up-to-date and on file?	X						
S15	OI	Verification/validation documentation for methods (NELAC Chapter 5)							
		Are all the methods used to generate the data documented, verified, and validated, where applicable?	X						
S16	OI	Laboratory standard operating procedures (SOPs)							
		Are laboratory SOPs current and on file for each method performed?	X						

LABORATORY REVIEW CHECKLIST (continued): Exception Reports			
Laboratory Name:	Accutest Gulf Coast	LRC Date:	7/17/2014
Project Name:	Memorial Drive, Houston, TX/731	Laboratory Project Number:	TC51322
Reviewer Name:	Anita Patel	Prep Batch Number(s):	GN59728, OP33179, OP33184, VG1385, VX2265, VX2266, VZ4352
ER# ¹	Description		
1	For reporting purposes, the MQL is defined in the report as the RL. The unadjusted MQL/RL is reported in the method blank. The SDL is defined in the report as the MDL.		
2	For reporting purposes, the method blank represents the unadjusted MQL. The DCS is on file in the laboratory and is not included in the laboratory data package.		
3	The laboratory is NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices, and methods associated with this laboratory data package for analytes that are listed in the Texas Fields of Accreditation.		
4	All anomalies are discussed in the case narrative.		

¹ER# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked on

GC/MS Volatiles

Intergenerational Support and Well-Being of Older Adults

Barbara A. Hanrahan¹, Robert A. Kane², and Robert W. Fogel³

¹University of Maryland System, ²University of Pennsylvania, and ³University of Michigan

Abstract This study examined the relationship between intergenerational support and well-being of older adults. Data were drawn from the National Longitudinal Survey of Aging, a nationally representative survey of older adults in the United States.

Results showed that intergenerational support was associated with better mental health, higher life satisfaction, and better functional status. The relationship between intergenerational support and well-being was mediated by social support and perceived health. The findings suggest that intergenerational support is an important factor in the well-being of older adults.

Keywords: intergenerational support, well-being, older adults, social support, perceived health

Older adults are a growing segment of the population, and their well-being is a major public health concern.

Intergenerational support, or the support that older adults receive from their family members, is an important source of social support and is associated with better mental health, higher life satisfaction, and better functional status (Folstein, Spector, & Frisvold, 2005; Hanrahan, Kane, & Fogel, 2008).

The purpose of this study was to examine the relationship between intergenerational support and well-being of older adults. We used data from the National Longitudinal Survey of Aging, a nationally representative survey of older adults in the United States.

Results showed that intergenerational support was associated with better mental health, higher life satisfaction, and better functional status. The relationship between intergenerational support and well-being was mediated by social support and perceived health.

The findings suggest that intergenerational support is an important factor in the well-being of older adults.

Older adults are a growing segment of the population, and their well-being is a major public health concern.

Intergenerational support, or the support that older adults receive from their family members, is an important source of social support and is associated with better mental health, higher life satisfaction, and better functional status (Folstein, Spector, & Frisvold, 2005; Hanrahan, Kane, & Fogel, 2008).

The purpose of this study was to examine the relationship between intergenerational support and well-being of older adults. We used data from the National Longitudinal Survey of Aging, a nationally representative survey of older adults in the United States.

Soil samples reported on a dry weight basis unless otherwise indicated on result page.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Berg Oliver Associates

Job No TC51321

Site: Memorial Drive, Houston, TX/7312-H-P2

Report Date 7/17/2014 4:36:39 PM

7 Samples were collected on 07/10/2014 and received intact at Accutest on 07/10/2014 and properly preserved in 1 cooler at 3.8 Deg C. These Samples received an Accutest job number of TC51321. A listing of the Laboratory Sample ID, Client Sample ID and dates of collection are presented in the Results Summary Section of this report.

Except as noted below, all method specified calibrations and quality control performance criteria were met for this job. For more information, please refer to QC summary pages.

Volatiles by GCMS By Method SW846 8260C

Matrix AQ	Batch ID: VZ4351
------------------	-------------------------

- ☐ All samples were analyzed within the recommended method holding time.
- ☐ All method blanks for this batch meet method specific criteria.
- ☐ Sample(s) TC51289-1MS, TC51289-1MSD were used as the QC samples indicated.

Matrix SO	Batch ID: VX2266
------------------	-------------------------

- ☐ All samples were analyzed within the recommended method holding time.
- ☐ All method blanks for this batch meet method specific criteria.
- ☐ Sample(s) TC51152-17MS, TC51152-17MSD were used as the QC samples indicated.

Extractables by GC By Method TNRCC 1005

Matrix AQ	Batch ID: OP33179
------------------	--------------------------

- ☐ All samples were extracted within the recommended method holding time.
- ☐ All samples were analyzed within the recommended method holding time.
- ☐ All method blanks for this batch meet method specific criteria.
- ☐ Sample(s) TC51305-1MS, TC51305-1MSD were used as the QC samples indicated.

Matrix SO	Batch ID: OP33169
------------------	--------------------------

- ☐ All samples were extracted within the recommended method holding time.
- ☐ All samples were analyzed within the recommended method holding time.
- ☐ Sample(s) TC51163-1MS, TC51163-1MSD were used as the QC samples indicated.
- ☐ All method blanks for this batch meet method specific criteria.
- ☐ Matrix Spike Recovery(s) for TPH (>C12-C28) are outside control limits. Probable cause due to matrix interference.

Wet Chemistry By Method SM 2540 G

Matrix SO	Batch ID: GN59669
------------------	--------------------------

- ☐ Sample(s) TC51300-IDUP were used as the QC samples for Solids, Percent.

Accutest Laboratories Gulf Coast (ALGC) certifies that this report meets the project requirements for analytical data produced for the samples as received at ALGC and as stated on the COC. ALGC certifies that the data meets the Data Quality Objectives for precision, accuracy and completeness as specified in the ALGC Quality Manual except as noted above. This report is to be used in its entirety. ALGC is not responsible for any assumptions of data quality if partial data packages are used

TC51321: Chain of Custody

Page 3 of 3

Appendix A Laboratory Data Package Cover Page

TC51321 This data package consists of

- This signature page, the laboratory review checklist, and the following reportable data:
- R1 Field chain-of-custody documentation;
- R2 Sample identification cross-reference;
- R3 Test reports (analytical data sheets) for each environmental sample that includes:
 - a) Items consistent with NELAC 5.13 or ISO/IEC 17025 Section 5.10
 - b) dilution factors,
 - c) preparation methods,
 - d) cleanup methods, and
 - e) if required for the project, tentatively identified compounds (TICs).
- R4 Surrogate recovery data including:
 - a) Calculated recovery (%R), and
 - b) The laboratory's surrogate QC limits.
- R5 Test reports/summary forms for blank samples;
- R6 Test reports/summary forms for laboratory control samples (LCSs) including:
 - a) LCS spiking amounts,
 - b) Calculated %R for each analyte, and
 - c) The laboratory's LCS QC limits.
- R7 Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including:
 - a) Samples associated with the MS/MSD clearly identified,
 - b) MS/MSD spiking amounts,
 - c) Concentration of each MS/MSD analyte measured in the parent and
 - d) Calculated %Rs and relative percent differences (RPDs), and
 - e) The laboratory's MS/MSD QC limits
- R8 Laboratory analytical duplicate (if applicable) recovery and precision:
 - a) The amount of analyte measured in the duplicate,
 - b) The calculated RPD, and
 - c) The laboratory's QC limits for analytical duplicates.
- R9 List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each
- R10 Other problems or anomalies.

The Exception Report for each "No" or "Not Reviewed (NR)" item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted in the Exception Report. This data package has been reviewed by the laboratory and is complete and technically compliant with the requirements of the methods used, except where noted by the laboratory in the attached exception reports. By my signature below, I affirm to the best of my knowledge, all problems/anomalies, observed by the laboratory as having the potential to affect the quality of the data, have been identified by the laboratory in the Laboratory Review Checklist, and no information or data have been knowingly withheld.

Check, if applicable: This laboratory meets an exception under 30 TAC&25.6 and was last inspection by

[] TCEQ or [] _____ on April 2011. Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

LABORATORY REVIEW CHECKLIST: REPORTABLE DATA										
Laboratory Name:		Accutest Gulf Coast		LRC Date:		7/17/2014				
Project Name:		Memorial Drive, Houston, TX/7312-H-P2		Laboratory Project Number:		TC51321				
Reviewer Name:		Anita Patel		Prep Batch Number(s):		GN59669, OP33169, OP33179, VX2266, VZ4351				
# ¹	A ²	DESCRIPTION				YES	NO	NA ³	NR ⁴	ER # ⁵
R1	OI	CHAIN-OF-CUSTODY (C-O-C):								
		Did samples meet the laboratory's standard conditions of sample acceptability upon receipt?				X				
		Were all departures from standard conditions described in an exception report?				X				
R2	OI	Sample and quality control (QC) identification								
		Are all field sample ID numbers cross-referenced to the laboratory ID numbers?				X				
		Are all laboratory ID numbers cross-referenced to the corresponding QC data?				X				
R3	OI	Test reports								
		Were samples prepared and analyzed within holding times?				X				
		Other than those results <MQL, were all other raw values bracketed by calibration standards?				X				
		Were calculations checked by a peer or supervisor?				X				
		Were all analyte identifications checked by a peer or supervisor?				X				
		Were sample detection limits reported for all analytes not detected?				X				
		Were all results for soil and sediment samples reported on a dry weight basis?				X				
		Were % moisture (or solids) reported for all soil and sediment samples?				X				
		Were bulk soils/solids samples for volatile analysis extracted with methanol per SW846 Method 5035?				X				
		If required for the project, are TIC's reported?						X		
R4	O	Surrogate recovery data								
		Were surrogates added prior to extraction?				X				
		Were surrogate percent recoveries in all samples within the laboratory QC limits?				X				
R5	OI	Test reports/summary forms for blank samples								
		Were appropriate type(s) of blanks analyzed?				X				
		Were blanks analyzed at the appropriate frequency?				X				
		Were method blanks taken through the entire analytical process, including preparation and, if applicable, cleanup procedures?				X				
		Were blank concentrations <MQL?				X				
R6	OI	Laboratory control samples (LCS):								
		Were all COCs included in the LCS?				X				
		Was each LCS taken through the entire analytical procedure, including prep and cleanup steps?				X				
		Were LCSs analyzed at required frequency?				X				
		Were LCS (and LCSD, if applicable) %Rs within the laboratory QC limits?				X				
		Does the detectability check sample data document the laboratory's capability to detect the COCs at the MDL used to calculate the SDLs?				X				
		Was the LCSD RPD within QC limits?				X				
R7	OI	Matrix spike (MS) and matrix spike duplicate (MSD) data								
		Were the project/method specified analytes included in the MS and MSD?				X				
		Were MS/MSD analyzed at the appropriate frequency?				X				
		Were MS (and MSD, if applicable) %Rs within the laboratory QC Limits?					X			4
		Were the MS/MSD RPDs within laboratory QC limits?				X				
R8	OI	Analytical duplicate data								
		Were appropriate analytical duplicates analyzed for each matrix?				X				
		Were analytical duplicates analyzed at the appropriate frequency?				X				
		Were RPDs or relative standard deviations within the laboratory QC limits?				X				
R9	OI	Method quantitation limits (MQLs):								
		Are the MQLs for each method analyte included in the laboratory data package?				X				
		Do the MQLs correspond to the concentration of the lowest non-zero calibration				X				
		Are unadjusted MQLs and DCSSs included in the laboratory data package?					X			2
R10	OI	Other problems/anomalies								
		Are all known problems/anomalies/special conditions noted in this LRC and ER?				X				
		Was applicable and available technology used to lower the SDL to minimize the				X				
		Is the laboratory NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices, and methods associated with this laboratory data package?				X				3

Laboratory Name:		Accutest Gulf Coast	LRC Date:	7/17/2014

# ¹	A ²	DESCRIPTION	YES	NO	NA ³	NR ⁴	ER # ⁵
S1	OI	Initial calibration (ICAL)					
		Were response factors and/or relative response factors for each analyte within QC limits?	X				
		Were percent RSDs or correlation coefficient criteria met?	X				
		Was the number of standards recommended in the method used for all analytes?	X				
		Were all points generated between the lowest and highest standard used to calculate the curve?	X				
		Are ICAL data available for all instruments used?	X				
		Has the initial calibration curve been verified using an appropriate second source standard?	X				
S2	OI	Initial and continuing calibration verification (ICCV AND CCV) and continuing					
		Was the CCV analyzed at the method-required frequency?	X				
		Were percent differences for each analyte within the method-required QC limits?	X				
		Was the ICAL curve verified for each analyte?	X				
		Was the absolute value of the analyte concentration in the inorganic CCB < MDL?			X		
S3	O	Mass spectral tuning					
		Was the appropriate compound for the method used for tuning?	X				
		Were ion abundance data within the method-required QC limits?	X				
S4	O	Internal standards (IS)					
		Were IS area counts and retention times within the method-required QC limits?	X				
S5	OI	Raw data (NELAC Section 5.5.10)					
		Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst?	X				
		Were data associated with manual integrations flagged on the raw data?	X				
S6	O	Dual column confirmation					
		Did dual column confirmation results meet the method-required QC?			X		
S7	O	Tentatively identified compounds (TICs):					
		If TICs were requested, were the mass spectra and TIC data subject to appropriate checks?			X		
S8	I	Interference Check Sample (ICS) results					
		Were percent recoveries within method QC limits?			X		
S9	I	Serial dilutions, post digestion spikes, and method of standard additions					
		Were percent differences, recoveries, and the linearity within the QC limits specified in the method?			X		
S10	OI	Method detection limit (MDL) studies					
		Was a MDL study performed for each reported analyte?	X				
		Is the MDL either adjusted or supported by the analysis of DCSs?	X				
S11	OI	Proficiency test reports					
		Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies?	X				
S12	OI	Standards documentation					
		Are all standards used in the analyses NIST-traceable or obtained from other appropriate source?	X				
S13	OI	Compound/analyte identification procedures					
		Are the procedures for compound/analyte identification documented?	X				
S14	OI	Demonstration of analyst competency (DOC)					
		Was DOC conducted consistent with NELAC Chapter 5?	X				
		Is documentation of the analyst's competency up-to-date and on file?	X				
S15	OI	Verification/validation documentation for methods (NELAC Chapter 5)					
		Are all the methods used to generate the data documented, verified, and validated, where applicable?	X				
S16	OI	Laboratory standard operating procedures (SOPs)					
		Are laboratory SOPs current and on file for each method performed?	X				

LABORATORY REVIEW CHECKLIST (continued): Exception Reports			
Laboratory Name:	Accutest Gulf Coast	LRC Date:	7/17/2014
Project Name:	Memorial Drive, Houston, TX/731	Laboratory Project Number:	TC51321
Reviewer Name:	Anita Patel	Prep Batch Number(s):	GN59669, OP33169, OP33179, VX2266, VZ4351
ER# ¹	Description		
1	For reporting purposes, the MQL is defined in the report as the RL. The unadjusted MQL/RL is reported in the method blank. The SDL is defined in the report as the MDL.		
2	For reporting purposes, the method blank represents the unadjusted MQL. The DCS is on file in the laboratory and is not included in the laboratory data package.		
3	The laboratory is NELAC-accredited under the Texas Laboratory Accreditation Program for the analytes, matrices, and methods associated with this laboratory data package for analytes that are listed in the Texas Fields of Accreditation.		
4	All anomalies are discussed in the case narrative.		

1ER# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No" is checked on

APPENDIX C

Photographs

Typical view of coring activities.

Typical view of concrete core.

Typical view of asphalt core.

Typical view of boring activities on Memorial Drive and S. Dairy Ashford (SB-15).

Typical view of boring activities on Memorial Drive and S. Kirkwood Road (SB-1). This location was cancelled due to the various structures underground in both the roadway and within the greenspace.

Typical view of groundwater extraction on Memorial Drive and S. Kirkwood Road (SB-2, GW-2).

View of soil boring activities relocated off the roadway (SB-18).

View of installation of groundwater screens and casing (SB-19).

APPENDIX D

MEMORIAL – PROPOSED UTILITY DEPTHS

Data Obtained from CivilTech Engineering

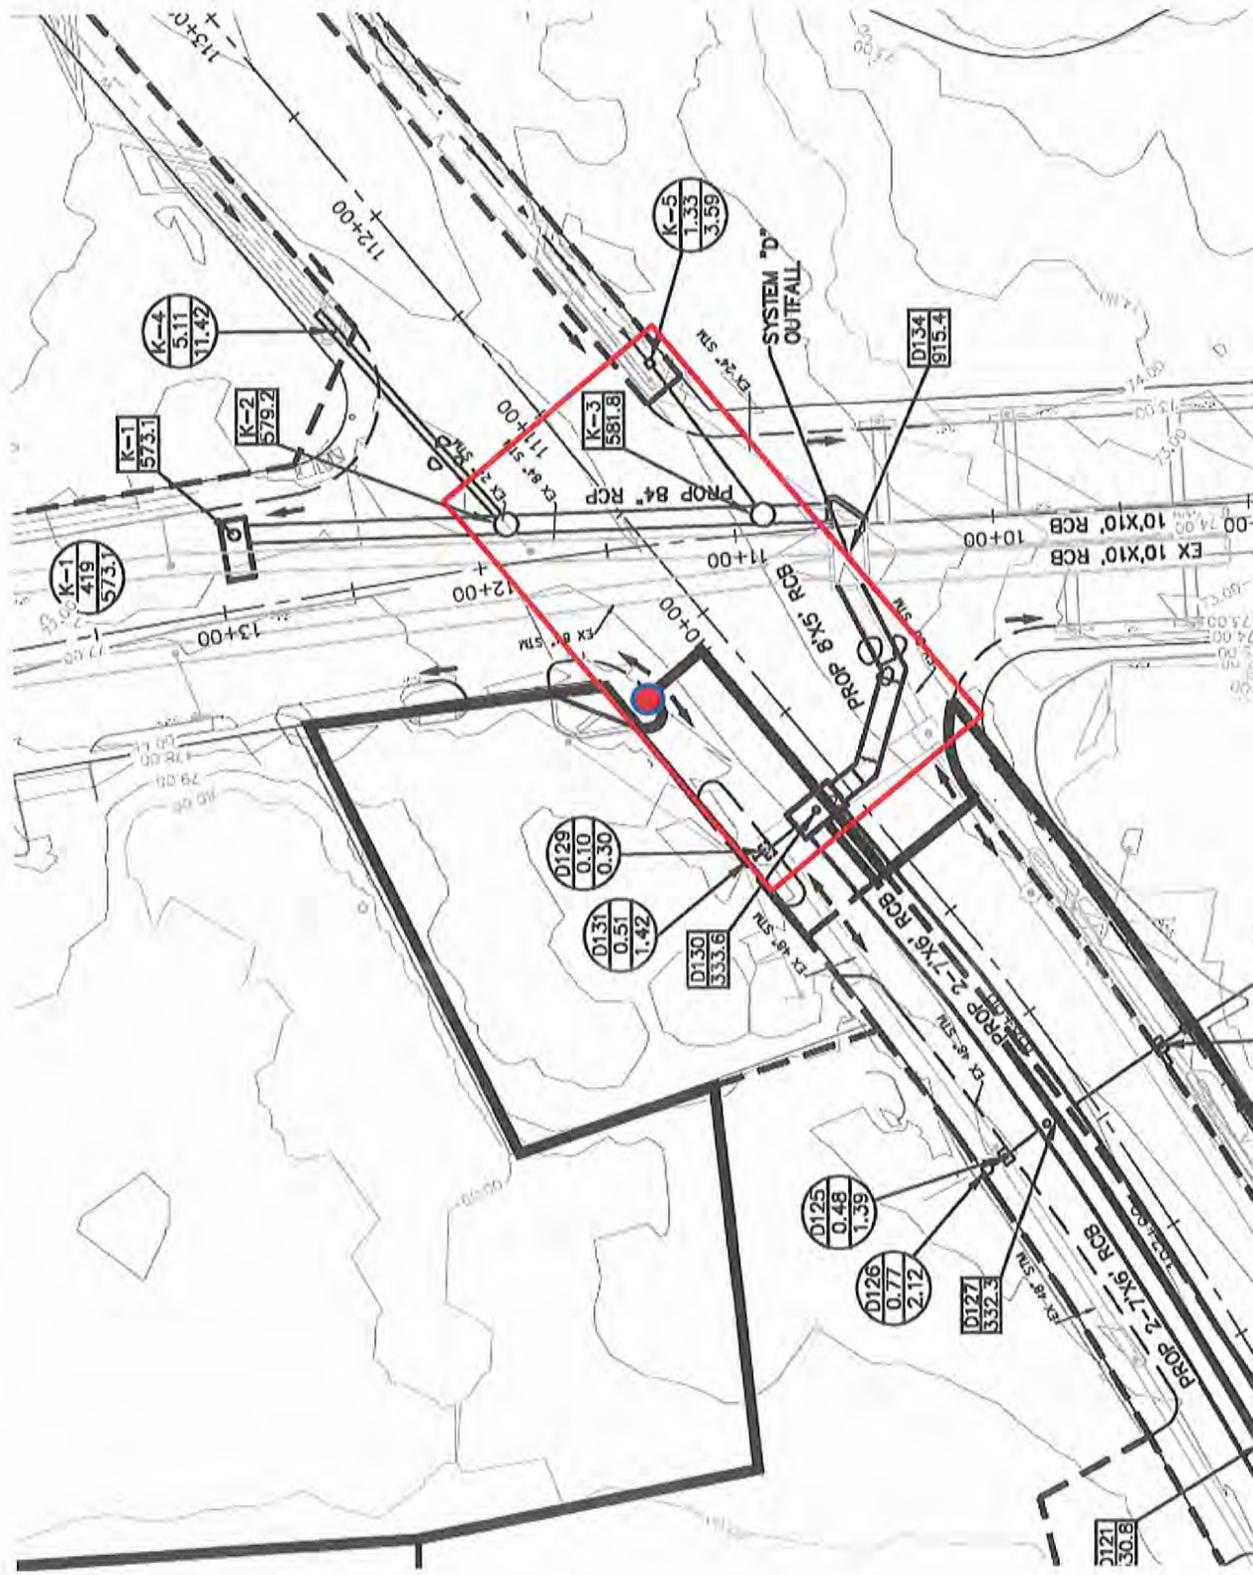

From East to West along Memorial Drive

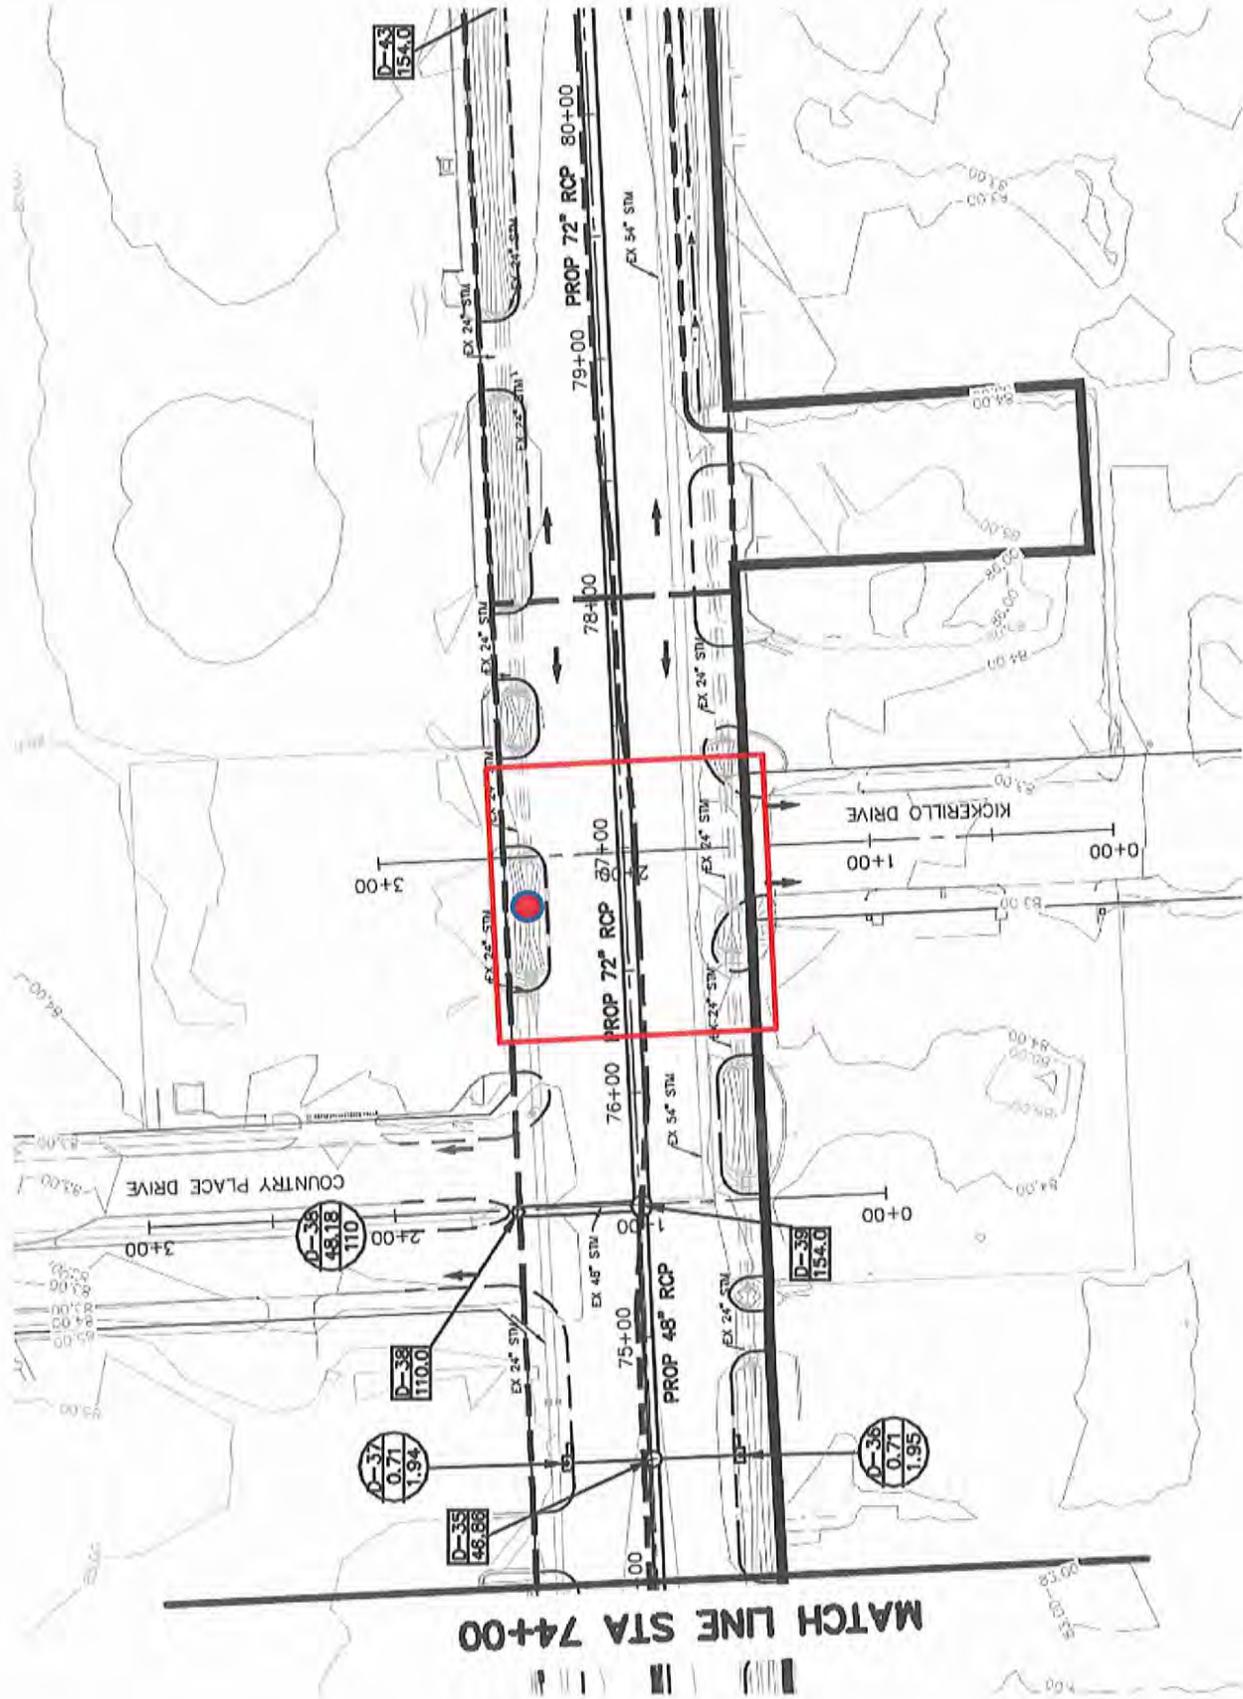

- 1) Kirkwood Road – 17.5 feet deep (See Sht 96-97)
- 2) Between Kickerillo Drive and County Place Drive - 17 feet deep (See Sht 82-83)
- 3) Winter Oaks Drive - 13 feet deep (See Sht 78-79)
- 4) East of Dairy Ashford (intersection) – 12 feet deep (See Sht. 74-75)
- 5) West of Dairy Ashford (intersection) – 20 feet deep (See Sht. 74-75)
- 6) Pinesap Drive - 18 feet deep (See Sht. 70-71)
- 7) Thicket Lane (North) to East of Thicket Lane (South) - 18 feet deep (See Sht. 68-69)
- 8) Thicket Lane (North) to West of Thicket Lane (North) - 9 feet deep (See Sht. 66-67)
- 9) Nottingham Oaks Trail - 16 feet deep (See Sht. 64-65)

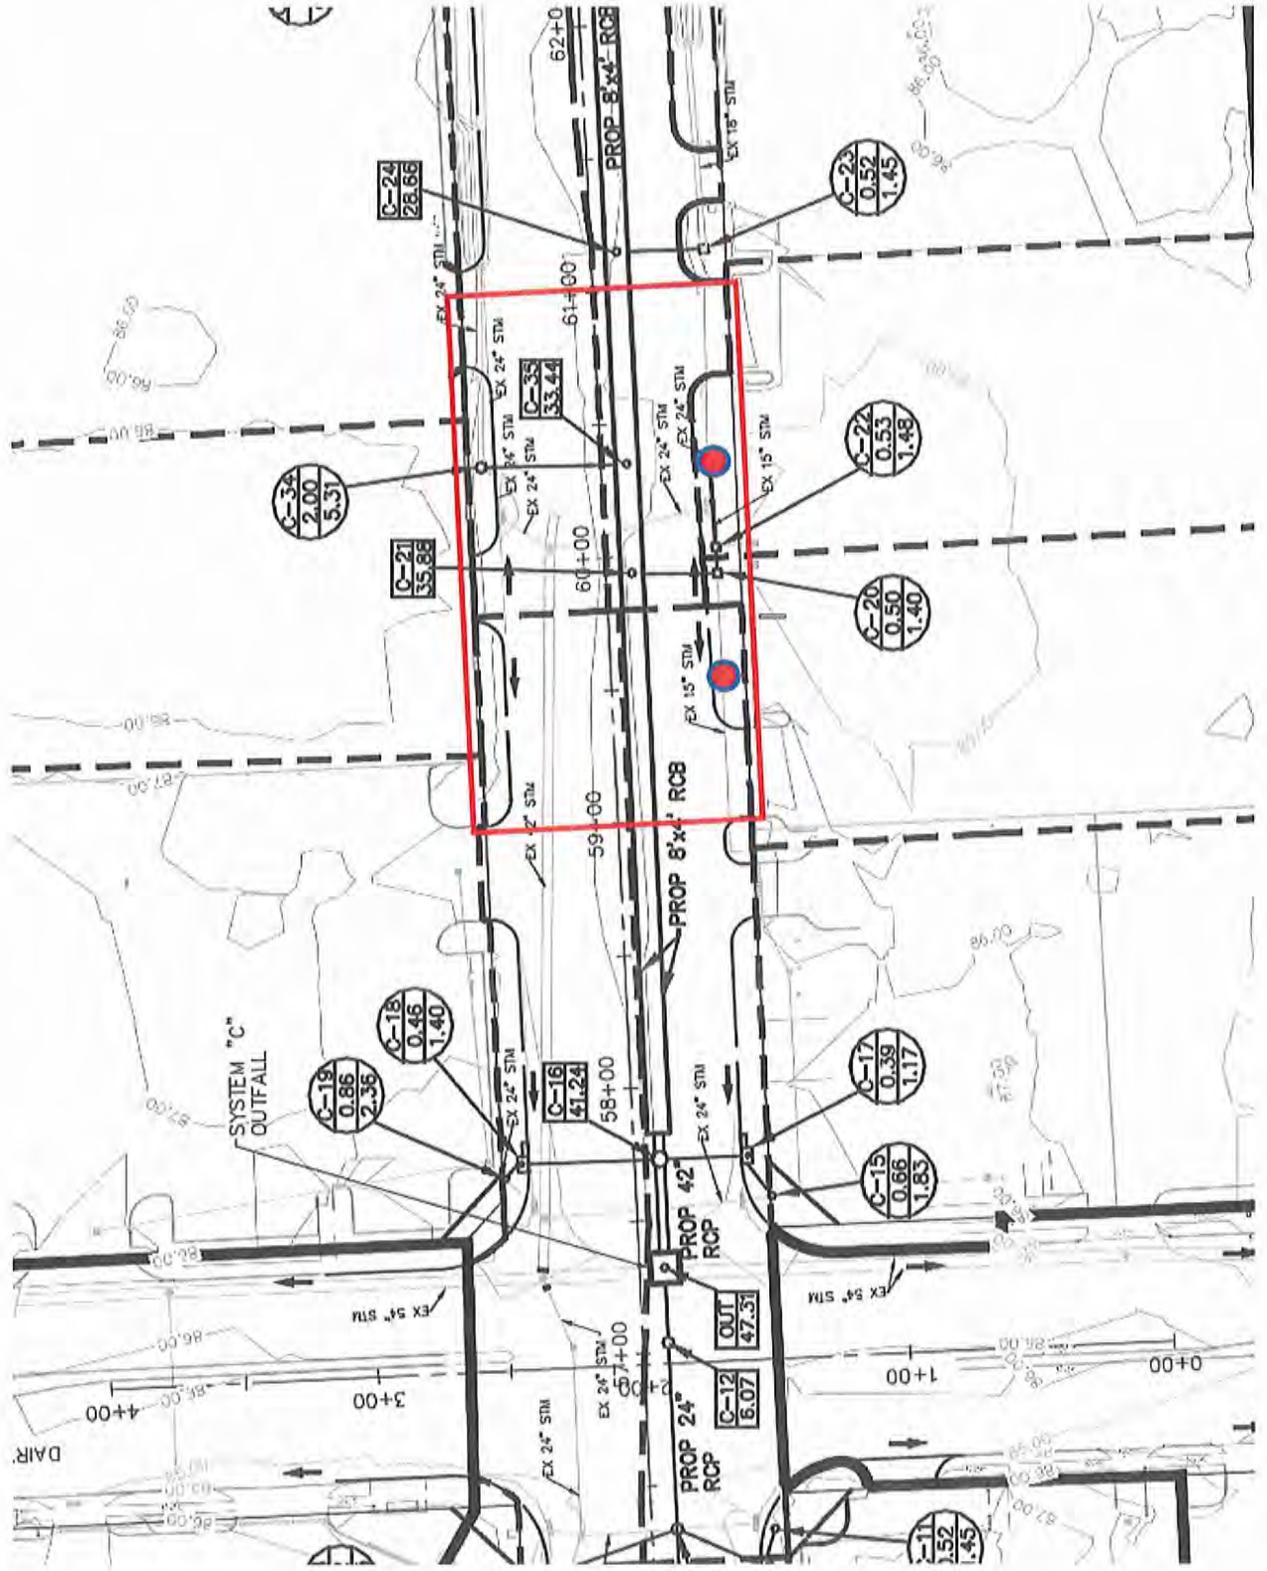

Range of depths: 9-20 feet

APPENDIX F

Qualifications of Environmental Professionals

SASHA O. ROSS
ENVIRONMENTAL SCIENTIST
HAZARDOUS AND TOXIC WASTE DEPARTMENT

EDUCATION

Bachelor of Science in Environmental Science
Oklahoma State University, Stillwater, OK

REGISTRATION/TRAINING/ORGANIZATIONS

Gamma Theta Upsilon- International Geographic Honor Society Member

EXPERIENCE

Mrs. Ross is an Environmental Scientist with over five years of experience. Her responsibilities have included: project management, conducting soil core extractions and testing, fresh and groundwater sampling and testing, fish seining (includes capture and identification of fresh water species), macro-invertebrate collections and identification, plant surveys, data collection, analysis and management, groundwater monitoring, and storm water effluent sampling. Mrs. Ross is well versed in the ASTM 1527 Standards, having conducted and prepared Phase I site assessments, as well as managing and conducting Phase II site assessments. Mrs. Ross also uses her knowledge of the National Environmental Policy Act (NEPA), Texas Risk Reduction Plan (TRRP), Clean Water Act (CWA), and Comprehensive Environmental Response, and Compensation and Liability Act (CERCLA) among other environmental acts and regulations to provide guidance and solutions to a variety of clients.

REPRESENTATIVE EXPERIENCE

ProGEA Global Inc. Environmental Consulting: Responsible for conducting Phase I Site Assessments to ASTM E1527-05 standards for various commercial properties such as autobody shops, churches, commercial retail facilities, restaurants, warehouses, lube centers, self-storage complexes and apartment complexes. Duties included site reconnaissance, conducting interviews, taking and logging inspection photos, writing reports, executive summaries, and field notes. Mrs. Ross also performed wetlands record reviews, endangered species reviews, as well as researched historical records including national historic sites, city directories, and Sanborn Fire Maps. Her duties required her proficiency in obtaining and reviewing Environmental Data Resources Inc. reports (EDR), and Freedom of Information Act (FOIA) requests to identify potential *recognized environmental conditions (RECs)*/concerns to assist in developing solutions for project development.

Environmental Science Senior Capstone; Oklahoma State University Stillwater, OK: Determined relationships between Suspended Sediment Concentrations (SSC) and Turbidity on characterized Oklahoma soils across the state. Results reported directly to Oklahoma Department of Transportation (ODOT) in a final presentation and written report. Lead group collaborations and arranged meeting with clients, organized and defined scope of work. Participated in researching effects of suspended sediment on ecosystems and manmade conveyances, constructed the experimental design, performed suspended sediment experiments on soils from all regions in Oklahoma, manually collected soil and runoff samples from construction sites, analyzed and compared run-off data based on soil types, prepared and constructed reports, as well as presented to client results with recommendations on suspended sediment risk on specific soil types.

Department of Plant and Soil Sciences; Oklahoma State University Stillwater, OK: Collected and tested soil cores and water sample collections for macronutrients in agricultural and urban environments. All data being evaluated for Phosphorous included Murphy Riley procedures to measure phosphorous concentrations in samples using spectrophotometry. Other duties included pH and electrical conductivity (EC) testing on water samples as well as agricultural and industrial by-

products, processed samples by vacuum filtration and centrifuge, prepared stock reagents, conducted *e. coli* testing on agar plates, calculated dilutions and performed general laboratory duties.

Department of Zoology; Oklahoma State University Stillwater, OK : National Science Foundation grant recipient summer 2011. Completed research on the effect of emerging contaminants and their effects on ancient and extant genotypes of the *Daphnia pulicaria*. Performed techniques in resurrection ecology including isolation and dissection of dormant eggs, experimental hatching (a.k.a. “resurrection”), zooplankton culture and maintenance, experimental design, data collection, and data analysis.

Oklahoma Conservation Commission - Blue Thumb division; Oklahoma City, OK: Performed stream monitoring by habitat assessment, fish and benthic invertebrate identification and collection, and fish seining. Performed water quality assessment including pH, dissolved oxygen, ammonia, chloride, nitrates, and phosphorous.

Sanctuary Water Gardens; Tulsa, OK: Performed wetland reclamation effort within an abandoned coal mine site. Coordinated and monitored the planting of hydrophytic plant species to absorb specific toxins in the environment on the previous coal mining site.

United States Geological Survey (USGS); Abandoned Landfill, Oklahoma City, OK: Performed DNA filtration on leachate samples in the field, cation and anion filtration, tested for dissolved oxygen, pH, electrical conductivity, ammonium, methane, iron and chlorides. Performed 400 leachate samples from multi-level wells using peristaltic groundwater pumps to examine the redox zones of the leachate plume and its underground migration.

Northwest Technical Services/ Pipeline Design Services; ConocoPhillips, Anchorage, AK: Managed proprietary oilfield and administrative data in various media formats in a lock-down facility, provided customer service to clients which included data research and data retrieval, performed data administration tasks such as data coding/entry/archiving, quality assurance checks, and safety courses.

**BENJAMIN M. PRICE, GEOLOGIST
VICE PRESIDENT AND PROJECT MANAGER
HAZARDOUS AND TOXIC WASTE DEPARTMENT**

EDUCATION

Master of Science, Geology
Texas A&M University (1991)

Bachelor of Science, Geology
Florida Atlantic University (1981)

CERTIFICATIONS/AFFILIATIONS

Professional Geoscientist (TX #3423)
Certified Wetland Delineator 1997
Certified Environmental Auditor, 1997
Registered Environmental Manager (R.E.M. #10916)
Federal Energy Regulatory Commission (FERC) Training and Certification
National Environmental Policy Act (NEPA) Training and Certification
Society of Wetland Scientists
Texas Association of Environmental Professionals
National Registry of Environmental Professional
Texas Department of Transportation Certification No. 6550
TxDOT precertified in 2.3.1, 2.4.1, 2.6.1, 2.13.1

EXPERIENCE

Mr. Price is an environmental scientist with diverse experience in both business and technical aspects of the environmental industry. Utilizing his extensive background in geological and biological disciplines, he has developed expertise in environmental regulations, property assessments, hazardous waste testing and evaluation, wetland evaluation, endangered species audits, health and safety issues, and silviculture activities. Mr. Price specializes in site investigations relating to hazardous material and petroleum product contamination. His experience with the petroleum industry and contaminated site remediation allows him to effectively consult on cost efficient solutions to environmental impairment concerns. Mr. Price is involved with problem solving related to environmental and ecological issues, especially those that may hinder property transfer, land development activities, or oil and gas activities. He has developed a unique working relationship with many federal and state resource agencies responsible for project permitting and approval.

REPRESENTATIVE PROJECTS

- ***Andrau Industrial and Airpark Environmental Site Assessments***, Private Development Project, Houston, Texas: Project Manager for the development and implementation of a work plan to assess the environmental risks posed by potential hazardous materials at the site. Tasks included sampling analytical methods, review of laboratory data for completeness and accuracy, interpretation of results, and preparation of final report.
- ***Pearland Manvel Dump Site***, Brazoria County District Attorney: Project Manager responsible for the Phase I Environmental Site Assessment and Phase II Testing. The project involved identifying portions of the site containing hazardous and radioactive liquids within the dumpsite. Groundwater monitoring and testing was conducted to evaluate potential off site transport of contaminants. Groundwater flow directions were determined for purposes of site closure. Recommendations to the PRP were made for future remediation goals to obtain state closure.

- **Alamo Lumber Company**, Subsurface Investigation and Remediation, City of Houston, Texas: Project Manager for the Phase I, Phase II, and Phase III investigations and remediation of soil and groundwater. Contaminates of concern included Pentachlorophenol (PCP) and various Dioxins. The project required agency supervision and approvals. Closure was obtained through TCEQ.
- **The Sprint Companies Landfill Expansion Environmental Assessment and Permitting Services**, Fort Bend County, Texas: Project Manager for the preparation of the Phase I Environmental Site Assessment for a 365-acre landfill site proposed to be expanded. The project was approved by the USACE, TCEQ, USFWS, and TPWD under a Clean Water Act Section 404 Permit with off-site mitigation banking.
- **Houston Comprehensive Bikeway Program Environmental Assessment**, City of Houston, all locations, Environmental Assessment. Project Coordinator for the preparation of an Environmental Assessment (EA) for the comprehensive bikeways program covering 100 lineal miles and involving a TxDOT EA for ISTEA funding. The project involved the preparation of NEPA documentation and assessments of environmental issues, such as wetlands, hazardous waste, historic preservation, threatened and endangered species, air quality, noise, water quality, hydrology, and flood plains.
 - **Little White Oak Bayou Hike & Bikeway Trail**: The proposed 0.6-mile trail begins southwest of the intersection of IH 45 and Loop 610 at Calvalcade Road and terminates along the IH 45 frontage road approximately 240 feet north of the intersection of Sylvester Road with the frontage road, in Harris County, Texas. Environmental clearance from TxDOT has been granted.
 - **Keegans Bayou Hike & Bike Trail**: The proposed 3.9-mile trail begins on the north bank of Keegans Bayou at Kirkwood Drive and terminates on the south bank of Brays Bayou at S. Gessner Drive in southwestern Harris County, Texas.
 - **Houston Heritage Corridor Bayou Trails (East Segment III)**: The proposed trail extends entirely on the southside of the bayou between North York Street and Lockwood Drive. The project is one segment of the multi-segment Houston Heritage Corridor System adopted by the City of Houston.
 - **Westchase District Hike and Bike Trail**: The proposed trail would begin on Riverview Way, on the west side of the Harris County Flood Control District drainage ditch W157-00-00, and terminate at Richmond Avenue in southwestern Harris County, Texas. Environmental clearance from TxDOT has been granted.
 - **Columbia Tap Hike and Bike Trail**: The proposed trail will begin at the on-street bicycle lane on Polk Street at the crossing of the abandoned Union Pacific (formerly Missouri-Pacific) Railroad tracks and terminate at the intersection of Bastrop Street and Texas Street in central Harris County, Texas. Environmental clearance from TxDOT has been granted.
 - **Halls Bayou Hike and Bike Trail**: The proposed trail will begin on the north bank of Halls Bayou at Hirsch Road and terminate on the north bank of the bayou at Bretshire Road, west of the Union Pacific Railroad in central Harris County, Texas.

- ***Stafford-Staffordshire Road Expansion Environmental Assessment***, City of Stafford, east Fort Bend County: Project Coordinator for the preparation of a TxDOT Environmental Assessment (EA) for the expansion of Stafford-Staffordshire Road through three jurisdictions (Harris County, City of Stafford, and City of Missouri City). The project involved preparation of a NEPA environmental assessment, including wetlands, hazardous waste, historic preservation, threatened and endangered species, air quality, water quality, hydrology, and flood plains.
- ***Sienna Plantation Environmental Assessment and Planning***, Private Client, east Fort Bend County, Texas: Project Coordinator for an approximate 11,000-acre project involving current and long range environmental planning. The project involved assessment, permitting, and mitigation for many different tracts and sections of the development. Specific tasks included evaluation of existing wetlands, creation of constructed wetlands, overall project planning, and hazardous waste assessments. The project also included historic, cultural, and archaeological preservation; threatened and endangered species, coordination, land management, and contractor supervision.
- ***US 59 and Grand Parkway Limited Environmental Assessment***, Private Development Project, Fort Bend County, Texas: Project Hazards Manager for the preparation of a Limited Environmental Assessment (EA) for a 500-acre land development between the Brazos River and US 59, bisected by the Grand Parkway. The project involved assessment and documentation of environmental issues, such as wetlands, hazardous waste, historic/archaeological investigation and preservation, threatened and endangered species, surface hydrology, and flood plains.
- ***Independence Boulevard, Murphy Road Detention and Drainage Facilities Environmental Assessments***, City of Missouri City, east Fort Bend County, Texas: Project Coordinator for the preparation of an Environmental Assessment for the extension of Murphy Road, the Environmental Assessment for the Murphy Road Detention and Drainage Improvements, and other environmental evaluations for the City of Missouri City, Texas. Projects involved preparation of Section 404 permit documentation, and assessment of environmental issues, such as wetlands, hazardous waste, historic/archaeological investigation and preservation, and threatened and endangered species.
- ***Sugarland Oil and Gas Field Assessment and Compliance Review***, Private Oil Company, northeast Fort Bend County: Project Coordinator for the environmental assessment and compliance review of a large oil field located around a salt dome structure. The property contained over 125 known oil and gas wells. Environmental evaluation included the evaluation of each currently producing and non-producing historic well site for hazardous material, toxic material, and petroleum products. Phase II site investigation and characterization is still ongoing.
- ***Dayton Rice Milling Environmental Services***, Harris County, Texas: Evaluation of agricultural pump house on Lake Houston. The project involved responding to citizen complaint of hydrocarbon contamination in Lake Houston, placing booms in lake to contain discharge, remediation of impacted soils to eliminate the source of hydrocarbon leaks and coordinate with TCEQ, COH to receive NFA from agencies.
- ***Farias Ranch Environmental Site Assessment and Phase II Testing***, PW Park 10, Inc., Maverick County, Texas: Conducted environmental site assessment and testing at a 100,000-acre ranch. The project involved performing Phase II Testing to identify potential impacts related to livestock dipping facilities located on the ranch property. The testing identified COC's, concentrations exceeding the TCEQ Texas specific background levels for certain metals and arsenic impacted soil at 3 historical cattle dipping vats. The project also involved remediation of the soils at each location, and submitting an Affected Property Assessment Report to the TCEQ and obtained state closure for these sites.

- **Harris County Sports Authority Environmental Site Assessment and Phase II Testing**, Harris County, Texas: Conducted Environmental site assessment Phase I, Phase II Testing and Phase III of future Reliant Stadium site. Identify onsite LPST sites and ACM containing structures. Remediate and obtain closure for LPST sites through TCEQ. Perform ACM abatement of several structures and historic onsite pipeline. Perform demolition at structures. Conduct all projects simultaneously to be completed within tight time constraints for Reliant Stadium construction.
- **AFG Properties Environmental Site Assessment and Phase II Testing**, Fort Bend County, Texas: Perform Phase I Environmental Site Assessment and Phase II Testing of the 3,000-acre historic sugarcane plantation. Discover impacted soil at two cattle dipping vat locations and oil and gas well site. Perform site clean up to residential standards for future master planned community.
- **FM 1960 Roadway Widening**, Harris County, Texas: Performed environmental site assessment for TxDOT to identify potential constraints related to the widening of FM 1960. Identify multiple adjoining properties, which could impact alignment.
- **Gosling Road**, Harris County, Texas: Project Coordinator for a Phase I Environmental Site Assessment for this TxDOT EA and Public Involvement for a 0.5-mile extension of Gosling Road, and its associated easements, located in northern Harris County. Project activities included a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-00 for the proposed project. Along with a visual survey of the project area, sources reviewed include the USGS Tomball quadrangle, NRCS soil surveys, FEMA maps, city directories, historical aerial photographs, reviews of standard environmental record sources (including selected agency files), and a Tobin Oil and Gas Survey Map.
